Barr's Pure Lawn Grass Seeds

For producing Beautiful Lawns, Tennls and Cricket Grounds, Bowling Greens, etc. Renovate Lawns, etc., In September, after the wear and tear of Summer (35 lb. of Grass Seed per acre).

The following Mixtures of Grass Seeds are composed of thoroughly cleaned seeds of highest quality only, and contain neither Clover nor coarse Grasses; they cannot fail to give the greatest satisfaction.

The seed is sold by weight, being the only correct method of estimating the quantity needed for a given space.

Leaflet on the Management of Lawns free on application.

- Barr's New Mixture of Dwarf Evergreen Grasses for producing an Extra Fine Smooth Lawn, a special mixture of the finest-leaved and dwarfest-growing perennial grasses, which from their fine, close, slow habit of growth and pleasing colour are best suited for forming lawns of the shortest and finest herbage, and thus greatly economising labour in mowing. Per lb. 2s.; 10 lb, for 19s.; 25 lb. for 46s,
- Barr's "Standard" Evergreen Grasses, for Garden Lawns, Tennis Courts, etc.
 This mixture is composed principally of the fine-leaved dwarf-growing grasses, all the seeds being highly cleaned and of pure and genuine quality. Per lb. 1s. 7d.; 10lb. for 14s. 6d.; 25 lb. for 35s.
- "Thames Embankment" Evergreen Grasses for Parks, Golf Links, Cricket Grounds, and Bowling Greens, a special mixture which has been found very successful on the Thames Embankment, and in the formation and renovation of many public and Barr's private parks and squares around London and throughout the country. Per lb. 1s.; 25 lb. for 24s.
- Barr's Special Mixture of Evergreen Grasses for sowing under Trees. This mixture contains a careful selection of those grasses most suitable for sowing under trees or in shady places, Per 1b. 2s. 3d.; per 10 lb. 21s.
- Barr's Fine-leaved Fescue Grass (Festuca ovina tenuifolia), for sowing where little bulbs are to be naturalised, like Narcissi Cyclamineus, Minimus, Queen of Spain, etc.; also Scillas, Chionodoxas, Snowdrops, etc. Per lb. 2s. 6d.
- Dutch Clover, Finest White. No Clover is included in the above mixtures of Grasses, as we consider a lawn should consist of Grass alone. If Clover is desired, however, it may be used at the rate of 3to 5lb. per acre; but it is preserable to sow the Clover separately from the Grass Seed. Per lb. 1s. 6d.

Barr's Special Lawn Phytobroma.

The best manure for Grass Lawns, Tennis Courts, Bowling Greens, Golf Links, etc.

Apply Spring and Autumn, using 2 oz. to the square yard at each application.

Bapp's Lawn Phytobroma is composed of those ingredients calculated to encourage a vigorous growth Sarri's Lawn Phytobroma is composed of those ingreements calculated to checolrage a vigorous growth of grass only, and in this respect differs from the potash manures, which are apt to stimulate clovers and coarse weeds. We can confidently recommend it for all grass-lands, as, by its use, a thicker growth and a richer colour will be obtained. It is a highly concentrated manure, and is therefore economical in use, a small quantity only being required at each application. Circular with fuller particulars sent on application.

Nett Prices—2 lb. tin, 1s.; In bags—7 lb., 2s. 6d.; 14 lb., 4s. 6d.; 28 lb., 7s. 6d.; 56 lb., 12s. 6d.; 1 cwt., 20s.

Prepaid Orders for 28 lb. and upwards sent Carriage Paid to any station in Great Britain or to any port on the Irish Coast.

Watson's Lawn Sand or Weed Destroyer.

WATSON'S LAWN SAND is the best Weed Killer for use on Lawns (4 oz. to the square yard). This preparation has the remarkable property of destroying Daisies, Plantains, Dandeltons, etc., on lawns, and at the same time acts as a manure and improves the Grass, enriching the colour and thickening the sward. Circular with full directions on application.

Nett Prices—Canisters, 1s., 2s. 6d. and 5s. 6d.; per \(\) cwt., 9s. 6d.; \(\) cwt., 18s.; 1 cwt., 34s.

BARR'S AUTUMN BULB CATALOGUE.

FEW PRACTICAL HINTS ON BULB CULTURE.

Culture for Spring-flowering Bulbs out of Doors.

Proper Condition of Soil.—Plant bulbs only when the ground is in a nice friable state, and never when the soil is wet and sticky; in such cases plant later when the soil is in a good friable condition.

Preparing Ground for Bulbs .- After digging or trenching, the ground should be allowed to settle at least ten days before planting.

Depth to Plant.-Many amateurs commit the fault of planting too deeply, and thousands of bulbs are spoilt in this way annually (crocuses especially). A good general rule to follow is, to cover the bulb with soil once and a half to twice its own depth, but not more, measuring the bulb from base to shoulder. Thus a daffodil bulb measuring two inches from base to shoulder should be covered with three to four inches of soil, and a crocus bulb measuring one inch in depth with only one and a half to two inches of soil.

Proper time to Plant and Best Position .- Information on this subject is given at the heading of each family. Amateurs frequently fail with many bulbous plants through planting at the wrong season, thinking that because September is the proper time to plant crocuses, all other autumn bulbs should be planted in the same month: whereas Tulips, Anemones, Ranunculi, Ixias, Sparaxis, Early Gladioli, etc., should not be planted before October or November.

Manure for Bulbs.—All bulbs object to the ammoniacal properties of fresh stable manure, consequently hot or fresh stable manure should never be used, but only well-decayed stable or cow manure, such as the material from an exhausted hot-bed. The safest manures for all bulbs growing outdoors is Phytobroma (price 20/- per cwt.; 2/6 per 7 lbs.) or phosphatic basic slag (price 10/6 per cwt.; 1/per 7 lbs.) for heavy soils, and crushed bones (price 14/- per cwt., 1/3 per 7 lbs.) for light and sandy soils. The Phytobroma should be applied at the rate of 8 cwt. per acre, or 3 oz. per square yard, early in spring, when top growth is showing; phosphatic basic slag or crushed bones should be put in the ground with the bulbs at the time of planting, the former at the rate of 1 ton per acre, or 7½ oz. per square yard, and the latter at the rate of 4 cwt. to the acre, or 1½ oz. to the square yard, and after planting, sprinkle on the surface of the ground sulphate of potash at the rate of 2 cwt. per acre or ¾ oz. per square yard (price 21/- per cwt., 1/9 per 7 lbs.). Where basic slag or crushed bones are used, Phytobroma may also be given at the rate of 1½ oz. to the square yard in spring, when top growth is showing. On hot dry and sandy soils, old stable manure may with advantage be used, to act as a sponge to hold moisture in the soil; it should be dug in 15 to 18 inches deep, so as not to come in contact with the bulbs. Where bulbs are grown in quantity for cutting, plant them on a piece of ground off which a vegetable crop (potatoes by preference) has been taken. The previous manuring for the potatoes, and the working of the soil in lifting them, brings the ground into first-rate condition for bulbs, and no more manure is required. Manure for Bulbs .- All bulbs object to the ammoniacal properties of fresh stable manure, conand no more manure is required.

For bulbs grown in pots 1 lb. of Phytobroma should be mixed with every bushel of soil, and a teaspoonful should be used as a surface dressing when the flower-buds are forming (see page 92).

Top Dressing.—Where possible, we advise a top dressing to all bulbs through the winter months with some light material such as long straw litter, cut heather, cut furze branches, etc., or cut fern bracken resting on pea sticks (cut fern used by itself lies too wet and is apt to rot the young growths). The advantage of this light covering is that it keeps the surface soil sweet by preventing the heavy autumnal rains from beating down the earth's count, it also restricts any earth to result. rains from beating down the earth's crust; it also protects any early top growth.

Lifting and Replanting .- When bulbs are lifted they should not, if possible, be replanted on the same ground, but where other bulbs or plants have previously been growing : thus, where Tulips have been growing last season, plant Narcissi this autumn, and so on.

Culture for Spring-flowering Bulbs in Pots or Boxes.

Time of Potting.-From the middle of September to the middle of October is the best month for potting Spring-flowering bulbs.

The best compost to use is a mixture of two-thirds good fibrous loam (which should be pulled to pieces by the hand and not passed through a sieve, so as to retain in the soil as much old root fibre as possible), and one-third old decayed leaf soil, with a sprinkling of sharp silver sand, adding $1\frac{1}{2}$ lbs. of bone meal or I lb. of Phytobroma (see page 92) to every bushel of soil, which mix well together before using. Never pot in soil that is wet or sticky.

The pots should be carefully washed or wiped clean before using. Never pot in dirty or wet pots.

Good drainage should be secured by placing three or more pieces of broken crocks over the drainage hole, placing the crocks with bevelled sides uppermost, and then covering with a little rough fibre from the loam. When boxes are used, the slit at bottom of box should be covered with crocks, and a good layer of rough fibrous loam placed at bottom of box, or a layer of leaf soil to ensure perfect drainage.

Covering the Bulbs .- The larger bulbs should be only half covered with soil, the level of which should be half an inch below the rim of the pot, to allow of watering when the bulbs are in growth.

CULTURE OF BULBS IN POTS OR BOXES-continued.

After potting, stand the pots or boxes outside in the open, under a north wall by preference, on a firm bottom such as a bed of ashes or a gravel path to prevent the entrance of worms. Then cover with Coeoa Fibre, ashes, or old decayed leaf soil, pressing down the covering material in between the pots, which should be completely buried to a depth of 3 to 4 inches from the top. This will secure a natural and moist condition to the bulbs and encourage root action. So long as the pots are plunged in the open they will require no watering.

The pots or boxes should remain plunged for a period of not less than twelve weeks, in order that the bulbs may get well rooted, after which portions may be removed indoors in succession, selecting first those which bloom naturally early. Place first in a cold frame, cool greenhouse, or cold setecting first those which bloom naturally early. Place first in a cold frame, cool greenhouse, or cold sitting-room free from draughts, and keep partially shaded for a few days, giving water gradually. Very weak liquid manure-water may then be given once a week until they come into bloom. Those that are wanted in bloom early may, after the flower buds are advanced, be placed in a warmer temperature, such as a slow forcing-house, but this should never exceed 65° if fine blooms are desired. The plants should always be kept as near to the glass as possible and not allowed to get drawn, from an insufficient supply of light or air. On no account should bottom heat be given. A frequent mistake made in forcing bulbs is that they are removed from the plunging-bed too early, before they have made a sufficient quantity of fibrous roots. They are then at once subjected to heat, and failure is the result. It is a good plan, when bulbs are removed from the plunging-bed, to place an inverted flower-pot over them for a day or two to prevent any check from draughts to the young top growths.

Pot-Culture of Early Gladioli, Ixias, Sparaxis, Tritonias, Babianas, Calochorti, etc.

These bulbs start carly into growth and therefore should not be potted up before the end of October to November. The pots should be plunged up to the rim only (not covered) in a cold frame, or under a south wall, for about three months, after which the treatment is similar to that for Spring-flowering bulbs.

Culture of Spring-Flowering Bulbs in Vases and Bowls.

Such as Hyacinths, Tulips, Daffodils, Crocuses, Scillas, Chionodoxas, Snowdrops, etc.

A charming effect can be obtained by growing spring-flowering bulbs in fancy vases and bowls, with or without drainage, by simply using our specially prepared Fertilised Cocoa Fibre and Charcoal Mixture (3s. 6d. per bushel, 1s. per peck); the mixture is light, clean, and nice to handle, and remains sweet (an important matter where the vases used have no drainage holes); indeed, it is in every way preferable to potting soil for flowering Daffodils and other bulbs in fancy bowls and vases.

Culture.—Fill the vase or bowl with the Cocoa Fibre Mixture and plant the bulbs in the same manner as with ordinary potting soil; the larger bulbs should be about half covered, and the smaller ones only just covered. When potting, fill the vase with the mixture up to a little below the rim, so as to allow sufficient space for watering. Pot firmly, After potting, give sufficient water to make the whole moderately damp. The vases may be then either placed in a cold frame and plunged in cocoa fibre for twelve weeks, or they may be placed in a dark cupboard or cool airy cellar until they have made a few inches of top growth. They should then be placed in the window of a cool airy sitting-room or in a cool greenhouse close to the glass, and flowered in the same way as pot Hyacinths, being always kept as near to the glass as possible, and given sufficient light and air to prevent the foliage from becoming drawn. When the flower buds are advanced, they may be removed to a warmer temperature, such as a slow forcing-house or warmer sitting-room, still being given as much light as possible. No bottom heat must ever be given, neither should they be placed in too warm a temperature until the flower buds are well developed. Once the bulbs have started to make good growth, the mixture should be kept moist, but water must be given sparingly until the bulbs have made some inches of top growth.

SPECIAL FANCY VASES AND BOWLS for growing Daffodils and other bulbs in.

We have had special little fancy vases made for us by Three bulbs of N. Queen of Spain growing in Messrs. Doulton for the above-named purpose. The vases are of elegant shape, of a neutral art drab shade, and without

drainage holes, thus saving the use of saucers. They will be found most useful for growing Spring-flowering bulbs in, either for table decoration or the greenhouse. During Summer they may be used for table decoration planted with Pansies or such low-growing hardy flowers, or for standing little pot-plants in.

Barr's "Doulton-Ware" Bulb Vases (as illustrated): -21 in. diameter, -/9; 4 in. dia., 1/3; 5½ in. dia., 2/-; 7 in. dia., 3/- each.

Fancy Decorated Japanese Bowls: - 5 in. diameter, -/10; 6 in. dia., 1/3; 7 in. dia., 1/9; 84 in. dia., 3/-; 92 in. dia., 4/-; 103 in. dia., 6/-; 12 in. dia., 8/6 each.

Barr's Fertilised Fibre and Charcoal Mixture, for growing bulbs in Vases, Bowls, Jardinets, etc., 3/6 pcr bushel; 1/- per peek (bags free).

Barr's Famous "Covent Garden"

Collections of Bulbs.

These Collections are not subject to Cash Discount, the prices being strictly nett. In the case of Prepaid Orders, however, we deliver the Collections Carriage Paid.

(After November 1 we may find it necessary to make slight changes in the Collections.)

(A) BARR'S 21/- COLLECTION of BULBS for FORCING.

Contains 309 Bulbs of fine quality, as follows:

25 Sweet-scented Single Jonquils 6 Single Tulip, Cottage Maid 12 Choice Named Hyacinths Keizerskroon 12 Early White Roman Hyacinths 3 Daffodil Golden Spur " Blush 6 Double Tournesol 3 P. R. Barr 0 bicolor Horsfieldii 50 Splendid (Named) Crocuses Azure 3 " 6 Double Roman Narcissi 6 Paper White "Early Snow-flake" Narcissi 25 Scilla sibirica 3 Queen of Spain 3 Telamonius plenus 50 Elwes' Giant Snowdrop 12 Chionodoxa Luciliæ poeticus ornatus 12 3 Polyanthus Narcissus "Grand sardensis 12 Single Tulip, Early Scarlet, "Duc Van Thol" 12 Scleil d'Or" 12 Allium neapolitanum 12 Freesia mixed hybrids Grand Monarque Chrysolora

(A) Barr's Collections of Bulbs for Forcing, 42/-, 63/-, 84/-, and 105/-, Containing equally liberal assortments of suitable Bulbs of fine quality, as in the 21/- Collection.

(B) BARR'S 21/- COLLECTION of BULBS for the GREENHOUSE, SITTING-ROOM, etc.

Containing 300 Bulbs of fine quality.

Arranged for those who prefer a few sorts only of easily cultivated Winter- and Spring-flowering Bulbs.

20 Choice Named Hyacinths
6 Early White Roman Hyacinths
3 Polyanthus Narcissus Grand
Monarque
3 ,, "Scilly Isles" White
3 ,, Grand Soleil d'Or
25 Sweet-scented Single Jonquils
3 Daffodil Golden Spur

3 Daffodil Emperor 6 bicolor Empress 3 Queen of Spain Telamonius plenus 3 ,, 6 poeticus ornatus 6 Single Tulip Chrysolora 6 Dusart 33 " Princess Marianne

6 Single Tulip Van Vondel
6 Double "Tournesol
100 Splendid Crocuses (Named)
25 Scilla sibirica
12 Chionodoxa Luciliæ

A Few Fine Novelties and Specialities

IN BULBS AND TUBERS, Etc., FOR 1906.

AGAPANTHUS	ich—s		d.
St. Pauli, bearing on stems 2 to $2\frac{1}{2}$ ft. high large umbels of pure white flowers about t size of A. Mooreanus; a charming plant for pots or tubs, etc.		7	6
Weillighi, a handsome new species of African Lily, with fine heads of lavender-colour flowers having indigo-blue line up the petals and a broad indigo-blue margin, ht. 3 ft		1	6
AMARYLLIS			
Belladonna purpurea maxima, a remarkably beantiful Belladonna Iily, beari handsome bold umbels of large soft rose flowers, 9 to 10 on an umbel, delicately hyacing seented; it flowers 2 to 3 weeks before the Belladonna Lily, ht. 3 ft	th-	ı	6
ANEMONE			
apennina fl. pl., a very pretty double-flowering form of this beautiful Anemone, flower pale blue, fully double, lasting a long time, ht. ½ ft	7/6)	8
"St. Brigid," an extra fine strain, of these lovely Poppy Anemones, flowers very large mostly semi-double, with finely divided petals, and of the most brilliant and varied shad of colour, all having a handsome blue-black central boss; very graceful in habit, ht. I ft. per 100, 10/6; per doz. 1	les	_	
a charming plant to naturalise on rockwork	r;	1	0
ARUM aristatum, a dainty little Dragon Arum with brilliant red spathe and black spadix, pleasantly seented; this Arum, like the Monarch of the East, may be flowered in dry state without the aid of soil or water	1 a 7/6	0	8
ASTILBE chinensis Davidii, a very handsome new Chinese hardy border perenni producing large plumes of handsome rich crimson-purple flowers with violet anthers, ht. 3 5 ft. First-Class Certificate R.H.S., August 1902per doz. 2	to 5/- :	2	6
CALOCHORTUS Venustus—Eldorado strain, a new race of the lovely Butter Tulips of tall sturdy growth, from 1½ to 2 ft. in ht., flowers varying greatly in shade—frewhite and cream to hlac, deep velvety purple and rosy purple, red, pink, and salmon, having the centre exquisitely blotched and speckled soft brown and golden-yellow, wh some have a beautiful golden blotch on each petal. Award of Merit R.H.S. (In the Cultural Notes and Illustration see page 18.)	all ile		
Mixed Beautiful Shades, in great varietyper 100, 12/6; per doz.	1/9		-
COLCHICUM giganteum, a grand Meadow Saffron from the Zigana Dagh (Gip Mountain), bearing immense expanded flowers of a Leautiful soft rose shading to white base, remarkably handsome. (See coloured flate in "Flora and Sylva," June 1903)	at		c
per doz. 10)/•	I	0
New Large-flowered Crested Varieties, flowers remarkably beautiful, having an elegant feathered erest. Colours white, rose, mauve, and white with rose eye each variety, per doz. 24/- & 30/-; each 2/3	& :	2	9
New "Papilio" or Butterfly Cyclamen, a very beautiful race; flowers lar and graceful; all elegantly fringed. Colours white, rose, red, mauve, and white with rose ceach variety, per doz. 24/- & 30/-; each 2/3	ye	2	a
CYRTANTHUS			,
angustifolius grandiflorus, the finest of all the Cyrtanthi of the Monella section and a handsome greenhouse plant for autumn flowering; it produces spikes 1½ to 2 ft. his	gh,	5	6
bearing umbels of 12 to 15 flowers, of a brilliant orange-searlet	ng)	0
greenhouse plant. Award of Merit R.H.S., April 5th, 1904		3	6
delicate rose with deep earmine reverse	•••	1	6
American Dog's Tooth Violet. (See page 27 for description)per 100, 10/6; per doz. 1 A few very large roots ,, 30/; ,,	ful 1/6 4/ -		2 5
"White Beauty," a lovely new variety of E. siganteum, hearing freely large creat white flowers of good substance, with yellow central zone, foliage the most richly mottled	OI		
all the Erythroniums	2/6 ' rm	0	3
greenhouse bulbous plant allied to the <i>Pancratium</i> , with handsome broad foliage and laught adds of pure white flowers, by I ft. Pot up in February and place in bottom heat, giving	rge ng	2	0
abundance of water while the plants are in growthper doz. 2	A*		9

	ea	ich
FREESIA Armstrongi, the Pink Freesia, flowers pretty bright rosy carmine with white centre and yellow throat, very free floweringper doz. 42/-	s.	d 0
Chapmanii, a beautiful new hybrid Freesia, a cross between <i>F. aurea</i> and <i>F. refracta alba</i> , bearing flowers nearly the size of <i>F. refracta alba</i> , and varying from primrose to canary with golden shading and brilliant orange blotch, delieately fragrant	3	6
refracta alba, The true Pure White variety, bearing sprays of deliciously scented snowy white flowers, highly prized for cutting, I ft. (The bulbs of this variety are a little	5	
smaller than the common F. refracta, but they produce more bloom and give greater satisfaction)		-
the size of Freesia refracta alba, of a delicate rose-lilac shade with white throat and base of tube bronzy gold, deliciously scented	5	6
GERBERA Jamesoni (Barberton Daisy), a very handsome plant from South Africa, bearing large showy flowers, resembling giant daisies, colour fiery orange-scarlet. Suitable for very hot sheltered sunny gardens, or may be grown as a cool greenhouse plant. per doz. 25/- & 36/-; 2/6 &	3	6
GLADIOLUS princeps, the largest-flowered and perhaps the most showy Gladiolus ever raised. The flowers are of great size, very open, and beautifully formed, colour brilliant deep scarlet with white stripe down centre of petal; remarkably effective in the flower-border per doz. 15/-	I	6
GLORIOSA Leopoldi, a fine new Glory Lily from the Congo, producing an abundance of beautiful self-golden-yellow flowers; a grand stove climber		6
HELONIOPSIS breviscapa, a charming little plant introduced by us from Japan, producing out-of-doors in February and March sturdy little spikes 4 in. high studded with dainty white flowers passing off rose; it delights in a half-shady situation. Award of		
Merit R.H.S. See coloured plate in "The Garden," July 22nd, 1905	2	6
Double White, a rare and beantiful variety with pure white very double flowers. First-Class Certificate R.H.S.	5	6
Double Blue, a favourite old garden plant, but scarce	1	6
HYMENOCALLIS amancæs, the Golden-Yellow Peruvian Daffodil, a rare and handsome		
greenhouse bulbons plant, ht. 1½ to 2 ft.	3	6
Delavayi , a lovely hardy Chinese plant with gracefully cut foliage, and producing in		
early summer sturdy spikes of large Gloxinia-like flowers ranging from brilliant rose to rose- earmine, with golden-yellow throat, ht. 2½ to 3 ft. It likes a sunny situation per 100, 55/-; per doz. 7/6	0	8
grandiflora, flowers a little larger than those of <i>I. Delavayi</i> and deeper in colour, deep rose to carmine with golden-yellow throat, beautiful, ht. 2 ft.		6
IRIS galatica, a very pretty species allied to Iris persica, having silvery grey standards shaded		
porcelain and falls blotched purple; charming on rockworkper 100, 21/-; per doz. 3/- lupceng, a handsome hybrid raised by Sir Michael Foster from I. lupina and I. Cengialti,		4
flowers large with lavender-purple standards and falls, elegantly waved at margin		6
Monspur, beautiful new tall hybrid Irises, specially adapted for the water's side. See page 46 pur-sind, a pretty free-blooming hybrid of I. persica purpura and I. Sindjarensis, producing dwarf plants		
covered with rosy purple flowers shaded blue, ht. 4 to 5 in.; charming in pots or on rockworkper doz. 15/-		6
sibirica Blue King, a very handsome new variety from Japan, having large and well-formed flowers of a		
fine clear blue, free bloomer and equally good for flower border or water's side, ht. 3 ftper doz. 7/6	0	9
sibirica Snow Queen an exquisite new hardyIris, flowers of a snowy whiteness large and well formed,		
produced in great abundance, foliage light and graceful, ht. 3 ft.; a gem for flower border or water's side. Award of Merit R.H.S., June 24th, 1902per doz. 15/-	1	6
persica Heldreichi (syn. stenophylla), the most beautiful of the Persica section of Irises. The flowers are of a lovely lavender shade, with velvety		
violet falls reticulated white on the upper part, and with yellow crest, ht. 4 in. First-Class Certificate R.H.S. This lovely Iris should be freely grown in pots		
and pans for indoor decoration, as well as in the rock		
garden, associated with the Winter Aconite, etc. (Much reduced). garden, associated with the Winter Aconite, etc. per doz. 7/6	0	8

		_
IRIS—continuea.	—s.	ď
NEW REGELIO-CYCLUS IRISES, a lovely new race of Irises, being the result of		_
crosses between the Regelia and Oncocyclus sections. They caused a great sensation at the		
Royal Horticultural Society's Show, May 17th, 1904, where several were awarded certificates. These Irises have proven to be of easy culture.		
Artemis, large flower, with bold standards of a violet-purple profusely veined, falls densely		
lined violet-purple on white, and having a dark velvety blotch. 1st-ClassCertificate R.H.S.	10	6
Charon, the finest of all, having a large handsome flower with standards claret-brown	-	
shaded bronzy yellow at margin, falls finely lined velvety brown on a bronzy yellow ground.		
First-Class Certificate R.H.S	7	6
Eos , standards light purplish rose, falls shaded and reticulated velvety brown on a cream-		
coloured ground. Award of Merit R.H.S.	6	6
Hecate, flower large, standards pale purple, finely lined, falls beautifully reticulated on a		
ercam-coloured ground and heavily shaded velvety reddish brown. Award of Merit R.H.S.,		,
May 15th, 1906. Iphigenia, large broad standards, bright purple with fine dark lines, falls heavily shaded	5	6
and veined velvety brown-purple on a creamy ground, blotched velvety purple-black. First-		
Class Certificate R.H.S.	8	6
Penelope, standards silvery pale purple finely reticulated, falls deeply veined purple on a		•
white ground, large and very beautiful	6	6
Psyche, flower large and beautiful, finely lined purple on a cream-coloured ground and with	Ŭ	Ŭ
a velvety crimson-black blotch. Award of Merit R.H.S.	8	6
Thalia, standards and falls beautifully veited violet on a white ground, and having a dark		
velvety purple blotch and beard	6	6
ACHENALIA "Cowslip," a very handsome new Lachenalia raised by an amateur in		
Australia. It produces a fine spike of large rich golden bells with rosy scarlet shading at		
top, while the expanded mouth is deeply margined maroon, foliage broad, stem spotted		
maroon, very pretty, ht. 9 in.	15	0
ILIUM		
auratum giganteum, a giant form of Lilium auratum platyphyllum, bearing grand spikes of very large flowers with broad white petals spotted crimson, foliage broad and		
handsome, ht. 6 to 10 ftstrong bulbs, p. doz. 30/-; extra strong bulbs, p. doz. 38/-; ea. 2/9 &	•	6
candidum (The Madonna Lily) a few monster bulbs, per 100, 55/-; per doz. 7/6	3	- 6 - 8
", ", ", ", " very large bulbs ", 35/-; ", 5/-	0	6
candidum speciosum, a remarkably robust growing variety, with very thick blackish	Ŭ	Ŭ
purple stems well clothed with foliage, growing 5 to 6 ft, high, and hearing about 20 to 25 flowers		
sometimes more. It blooms later than the ordinary L. candidum. A very handsome		
Lily for borders, scarcestrong bulbs, per doz. 12/6	1	3
longiflorum, from the Azores, producing very freely long handsome trumpet-		
shaped flowers of a snowy white, of graceful habit, ht. 3 ft.; a splendid Lily for early forcing. Bulbs supplied from September to Novemberper doz. 12/-		_
pardalinum Burbank's Hybrids, very fine hybrids raised by Mr. Luther	1	3
Burbank between L. pardalinum and L. Humboldti, producing robust-growing plants with		
heads of handsome flowers varying from clear orange to orange with crimson tips, all		
beautifully spottedper doz. 25/-	2	3
pardalinum "Red Giant," a remarkably fine new Lily selected from hybrids raised		Ĭ
by Mr. Luther Burbank; it is a very strong grower, bearing in July heads of blood-crimson		
flowers shaded red towards centre and profusely spotted dark maroon, remarkably effective	5	6
ISSOCHILI from the Transvaal, beautiful terrestrial orchids collected on the open		
veldt in the Transvaal, and comprising different varieties, white and rosc, yellow, and inter-		
mediate tints, all beautiful. Culture as for Nerines is recommended, the roots being kept dry except when in growth	_	
NONTBRETIAS—Beautiful New Hybrids, most elegant border or pot plants, bear	2	9
ing in August spikes of most gorgeously coloured flowers. (For general collection see page 60)		
Anneau d'Or, bearing grand broad-petalled flowers measuring over 2 inches across, brilliant		
orange-yellow with velvety purple base and light yellow centre, buds rich dark red	2	6
Congo, flowers a very rich dark orange-red, remarkably handsome, per 100, 35/-; per doz. 5/-	0	6
Lothario, flowers a very brilliant apricot-yellow with orange-red, bright and attractive	2	0
Tragédie, perhaps the darkest coloured of all Montbretias and remarkably effective,	_	Ŭ
flowers broad petalled, rich deep orange, the lower half maroon-purple, buds almost black		
shaded orange at apex, ht. 2½ to 3 ft	2	6
MUSCARI		
"Heavenly Blue," the most beautiful of all Starch and Grape Hyacinths, and one of the		
lovelicst blue flowers of spring	-	-,
Masseyanum, a very distinct new Tassel-Hyacinth with bright rosy coloured flowers	2	6
Bowdeni , a new species from Cape Colony, and the finest of the section. It bears large		
umbels of flowers 3 to 4 inches across; pink with a dark rose-coloured line running down		
each petal. Award of Merit R.H.S.	7	6

NERINE-continued. each.	-s.	d
flexuosa alba, a rare and heautiful bulbous plant, hearing an umbel of about twelve snowy white flowers, with elegantly undulated and recurving petals, ht. 2 ft.; a fine subject for pot-culture in cool greenhouse, or to plant out of doors under a south wall. Awarded		
a Botanical Certificate R.H.S., October 21st, 1902per doz. 30/- marginata, a beautiful showy species from the south-western part of Cape Colony, bearing	2	9
an umbel of 10 to 20 bright searlet flowers; a fine greenhouse plantper doz. 36/- pancratioides, a remarkable species from Natal, with long stender leaves and tall spikes	3	6
of blush-white flowers with rudimentary corona	3	6
Beautiful New Hybrids of rare crosses, and varying in colour from pink to dark crimson, ht. 18 in	2	9
flower bordersper 100, 7/6; per doz. 1/3	_	
RICHARDIA Mrs. Roosevelt, a handsome new variety with flowers as large as Elliottiana, but of a beautiful delicate pale primrose, with yellow spadix and slight violet blotch in centre, foliage rich deep green freely blotched silvery white, a strong grower. Award of		
Merit R.H.S., July 10th, 1906	2	6
SPIRÆA Aruncus Kneiffii, a very graceful new variety of the Goat's Beard, with elegant finely divided foliage and plumes of dainty white flowers; it has not the very strong rampant habit of other Spiræas, and should only be planted in the choicer parts of the garden, ht. 2 ft	I	6
THALICTRUM Delavayi, a lovely new Meadow Rue from China, with dwarf Maidenhair- Fern-like foliage, from which rise slender spikes with panicles of soft lilae-blue flowers, ht. 2 ft. Award of Merit R.H.S.	2	6
TULIPS—New Cottage Tulips and species. Mostly May-flowering.	~	ľ
Beauty, flowers rich golden-yellow, lightly flamed red at margin, anthers black, very showy, lt. 18 inper doz. 5/6	0	6
Ellen Willmott, a beautiful new Tulip with large and very long flowers of elegant form,		C
delicate canary-yellow, shaded chrome on the outer petals; good for forcingper doz. 17/6 Feu Ardent, large bold flower, dark glossy orange-searlet shading to maroon, very handsome, ht. 18 in.	1 2	6
Fosteriana, a grand Tulip from Bokhara, having immense flowers of a gorgeous glowing scarlet, with centre either yellow or yellow and maroon. First-Class Certificate, May 1st, 1906	I	6
Inglescombe Yellow, may be called a Yellow Darwin Tulip, large globular flowers of perfect form of a glossy canary-yellow, a remarkably beautiful flower, ht. 18 in. Award of Merit R.H.S., May 15th, 1906	I	8
Kroeschel, very large handsome globular flower, dark searlet, heavily flamed golden-yellow and orange-red, ht. 20 in	I	C
Louis XIV. , globular flower of immense size, with broad petals rich purple heavily flushed at margin a golden-bronze, inside golden-bronze shading to bronzy purple, very tall and		
stately; a remarkably handsome flower	3	0
electric-blue, nery scarce Primrose Beauty, a very beautiful new Cottage Tulip, with elegantly formed flowers.	3	6
opening a delicate soft primrose and passing off a cream colour, delicately scented like Tea Roses: forces wellper doz. 8/6	0	9
Quaintness, large handsome long flowers, inside shaded mahogany on a dark golden		
ground, outside flushed deep rose, very distinct. Award of Merit R.H.S., 1905	5	6
rose with large snowy white centre margined rich blue, very striking, ht. 35 inper doz. 24/-	2	3
Rose Dorée, flower of elegant pitcher form, rose shading to orange and amber, presenting quite an art shade, delicately scentedper doz. 21/-	2	C
Salmon Prince, a very beautiful Tulip with fine globular flowers, apricot-orange, shaded gold, very showy, ht. 24 inper 100, 75/-; per doz. 10/6	I	C
Scarlet Emperor, a very fine bold flower of a brilliant glowing searlet, with rich clear yellow centre and black anthers First-Class Certificate R.H.S., May 17th, 1904. per doz. 21/-	2	C

reddish brown, very stately, lit. 25 in		,
lasting Tulip, ht. 18 in. Award of Merit R.H.S., May 15th, 1906, only a few bulbs for sale Water Lily, a tall handsome Tulip with very large solid white flowers with spreading petals,	15	(
resembling a Water Lify, scarce	2	ϵ
three inner ones globular, outer ones reflexing, delicately scentedper doz. 21/- TULIP, Early Single "Brilliant Star," a grand showy early Tulip; flowers rich	2	(
dazzling scarlet with large yellow centre marked black, ht. 12 inper doz. 18/-	I	2

Hardy Bulbs and Plants.

For extensive planting in Shrubberies, Wild Gardens, Woodlands, Grass Lands, etc.

MUSCARI "HEAVENLY BLUE" ESTABLISHED ON A HEDGE BANK AT OUR SURBITON NURSERIES.

A Few Remarks on Naturalising Bulbs in Grass, etc.

This fascinating phase of gardening deserves more attention than has hitherto been bestowed upon it. No sight is more delightful than the fresh brightness of spring-flowers growing freely in grass land or lending colour to woodland walks, hedgerows, and ditches, here and there nestling at the foot of trees, or establishing themselves on sloping banks.

For naturalising in grass spring flowers are especially suitable, as they bloom and are over before the grass grows tall enough to hide their beauty. Amongst our spring-flowering bulbs there are many gems which refuse to grow in cultivated borders, but when planted in grass, where they enjoy a cooler and more even temperature, they soon become established, and multiply freely until a regular colony is formed which greatly adds to the charm of the landscape.

All formality of arrangement should be avoided, the bulbs being scattered freely from the hand and planted where they fall. Large irregular breaks of one kind of bulb should be made in order to obtain the finest effect.

In planting under trees select spots where the soil is deepest and where the drip is least.

Those whose gardens are of limited size might make them very beautiful in spring, by utilising the fringes of their lawns and any grassy mounds or shady shrubbery walks for such spring favourites as Daffodils, Anemones, Seillas, Crocuses, Chionodoxas, etc., reserving the borders for summer- and autumn-flowering herbaceous plants.

In large gardens and parks ample opportunities are afforded for naturalising spring-flowering bulbs, and very beautiful results may be attained in this way.

In planting bulbs in grass Barr's Bulb Planter (see page 91), should always be used. It cuts out a clean piece of turf, leaving a hole to receive the bulb, and on making the second cutting clears itself of the first piece of turf, which lies ready at hand for covering the bulb. This handy implement saves an immense amount of time, and does not, as with an ordinary dibber, leave a hard resting-place for the bulb while by its use the grass is not in the least disturbed. Planting should not take place while the ground shard, but after the first autumn rains.

BULBS AND PLANTS FOR EXTENSIVE PLANTING-continued.

Among the many gems which lend themselves to wild gardening and naturalising, we would specially mention the following :-

Wood Anemones (see page 14), including the exquisite Anemone Robinsoniana and the deeper blue and slightly taller Anemone apennina and blanda; one must see these lovely flowers nestling in grass or against the roots of large trees, to appreciate them fully.

Alliums (page 12). Amongst these we would mention Allium Moly, with its bright yellow flowers, thriving anywhere; also the graceful little Allium neapolitanum, so useful for shady corners.

Anthericums (page 10), very graceful and decorative in grass.

Asphodelus luteus and ramosus (page 11), two fine plants for naturalising in grass.

Ornithogalums (page 64), flowering freely anywhere, and producing a very beautiful effect when dibbled in on banks and blended with Tulips, Muscaris, etc.

lips. These may often be naturalised on banks where, in the same locality, if planted on the level they die out. Tulipa sylvestris and the dainty little Tulipa persica may be naturalised almost anywhere; the May-flowering Cottage Tulips (page 78) should be freely used for naturalising, especially Picotee, Parisian Yellow, macrospila, Gesneriana, Bouton d'or, etc. Plant at least 6 to 9 inches deep. All Tulips thrive best in partial shade and where sheltered from keen winds.

Wood Hyacinths (Late Scillas) (page 68) should be planted freely in shady walks; they soon make themselves at home and seed plentifully, with the result of much beautiful variation in form

and character. Under pine and fir trees they may be naturalised with success.

tillaries (page 28). The purple and white Snakeshead Fritillaries (F. meleagris) are found growing wild in a few districts in England, and thus seen form a charming picture, full of grace and beauty. Fritillaries (page 28). For shady corners they will be greatly appreciated, also when naturalised in grass.

Dog's Tooth Violets (Erythronium dens-canis, page 26) are lovely little subjects for shady

places where the grass is not too rank.

Crocuses. In grass the bright fresh colours of spring Crocuses contrast charmingly with their carpet of green. The beauty of C. speciosus (page 24) in September must strike every observer, while

C. Tommasinianus (page 24) produces a lovely effect in February and March.

Chionodoxas (page 20) are amongst the most beautiful of early blue flowers, and should be largely used where the grass is kept short and not allowed to grow too coarse. C. Luciliue and sardensis are followed by the beautiful C. grandiflora and Tmolusii.

Scillas, early-flowering, such as sibirica, sibirica alba, bifolia, amæna, etc., all charming little

subjects for naturalising.

Muscari (page 61) "Heavenly Blue" may be termed the QUEEN OF BLUE FLOWERS; for a distant effect, massed on grassy banks or grouped for colour, it has no equal. M. botryoides caruleum and its varieties, flowering earlier than *Heavenly Blue*, are also charming little subjects to naturalise. **Daffodils.** For these favourite flowers, we refer readers to our **Daffodil Catalogue**.

System of Planting, Arranging, etc.

In the grouping of Bulbs for naturalisation avoid anything approaching formality, and let the arrangement be a free and unconventional one. A good plan is to scatter the bulbs loosely from the hand and plant them where they happen to fall, thus forming irregular sweeps and breaks of colour here and there.

THE SYSTEM OF PLANTING.—For planting bulbs in grass we have had a **Bulb Planter** specially made, and by its use much time is saved and the turf is not spoilt. *Particulars* as to its use are given on page 9. In shrubbery borders and in hard ground our special **Bulb Dibber** should always be used, the planting taking place after the first autumn rains; a hole is made the requisite depth, some fresh soil put in, and then the bulb inserted, after which the hole is filled up.

IN SELECTING Positions the first consideration should be what best suits the subjects to be planted: too often shade-loving plants are found struggling for existence in full sun, and vice versa. In the following pages at the heading of each family we indicate as far as possible its cultural requirements. In planting beneath trees select spots where the soil is deepest and the drip least, which means avoiding the main branches or arms.

CUTTING OF GRASS.—It is advisable that this be done as late in September as possible, so as to ensure it being short at the time the bulbs flower. In meadowland Spring-flowering bulbs in no way affect the hay crop, which may be cut at the usual season.

§ indicatee those flowers which will thrive in chady placee, under trees, on chady banks,

etc., or may be planted in the open border.

* indicatee those bulbs, etc., which are essentially wood plante, and should only be grown in shady eituatione.

For full descriptions see body of Catalogue.

BULBS AND TUBERS.

FOR ALL SEASONS AND CLIMATES.

ALPHABETICALLY ARRANGED FOR EASY REFERENCE.

In the following pages we give descriptions, as far as space permits, of the various Bulbs, etc., with general notes as to their cultural requirements. The larger illustrations are mostly reproductions, on a greatly reduced scale, of photographs taken at our Surbiton Bulb Nurseries.

Great care is taken in the selecting of our Bulbs, these being drawn from the best bulb farms only. High-class Daffodils and Tulips, etc., also many little rare and beautiful bulbous plants, we are ourselves large growers of.

only. High-class Dastodils and Tulips, etc., also many little rare and beautiful bulbous plants, courselves large growers of.	we e	are
Those bulbs and tubers marked thus x ripen late and are sent out from the n of October to March. All other bulbs, etc., are ready for despatch in September. O which embrace earlier and later ripening bulbs, etc., will be executed therefore in two	rde par	rs
* ABOBRA viridiflora, an elegant half-hardy perennial scarlet-fruited climber; plant outdoors in Spring and lift the tubers in Autumn, storing them in dry sand in a cool place away from frost		6
* ACHIMENES, these make charming pot-plants for the greenhouse, and are very decorative with their brilliantly coloured elegant flowers; pot in rich light soil in Spring and start in a gentle bottom heat.		
3 each of 8 distinct varieties, 8/-; I each of 8 distinct varieties, 3/-		
Beautiful Hybrids, mixed, containing a great variety of charming colours		
tubiflora (syn. Dolichodeira), a valuable but little known pot-plant for greenhouse, bearing trusses of long tubular white flowers which have a delicious fragranceper doz. 5/6	0	6
ACONITE-Winter. See Winter Aconite.		
AGAPANTHUS (African Lily), valuable subjects for growing in tubs and pots, either for greenhouse or summer decoration in porches, on verandahs, terrace walks, and lawns, ctc. They are also very effective planted out by streams, lakes, and ponds. During severe winters they should be covered with light litter or long manure, or in very cold climates lift the tubers in October and store in dry soil, replanting them in March. This plant is a gross feeder, and likes a rich soil with plenty of moisture while in growth.

zebdanense , producing umbels of pure white flowers on slender erect stems, in May, ht. 1\frac{1}{4} ftpcr 100, 21/-; pcr doz. 3/- 0	4
** ALSTROMERIA, these beautiful "Peruvian Lilies" are easy to cultivate, and produce in Summer abundance of showy attractive flowers, which last long in water when cut. They like a well-drained light soil and a sunny situation. Aurantiaca, chilensis, and lutea produce a most brilliant effect in the flower border. Plant with the top 4 inches below the surface, by preference close to a south wall or hedge, and protect, the first Winter, with leaves or litter. A. pelegrina, A. pulchra, and A. revoluta are more tender, and delight in hot dry sunny situations, such as under a south wall, and require protection each winter; they also make fine plants for a cool greenhouse.	
aurantiaca (syn. aurea), flowers ranging from rich orange to orange-red, spotted carmine, very showy and valuable for cutting; it should be grouped in every herbaceous border, ltt. 3 ft	2
chilensis hybrida, mixed, beautiful shades of rose, crimson, orange, yellow, buff, and blush, with yellow and crimson markings, ht. 2 ftper 100, 7/6; per doz. 1/3 o	2
Erembaulti, bright rose with green markings, interior of flower conspicuously flaked blood-crimson on a blush ground, ht. 2 ft	8
	4
,, rosea, flowers rose, beautifully spotted, ht. I ft, 21/-; ,, 3/- o psittacina (The Parrot Flower), flowers bright crimson, splashed green and mahogany, ht. 2 ft	4
pulchra (syn. tricolor), flowers white and yellow, blotched crimson, ht. 1 ft. per 100, 15/-; per doz. 2/3 o	3
revoluta, a handsome variety, producing large heads of orange-red flowers per 100, 30/-; per doz. 4/- o	5
×AMARYLLIS (Hippeastrum), choice Greenhouse Varieties. These	arc
magnificent in the conservatory, and with management may be had in bloom for many months.	
CULTURE.—Pot up the bulbs from December to March, and plunge the pots to the rim in gentle, steady, moist bottom heat; thus treated, a vigorous leaf-growth is produced, and a strostem with a fine umbel of large flowers secured. In the absence of bottom heat they do well in ordinary greenhouse or sunny sitting-room window if potted up in February.	ng

ANEMONE Fulgens, The Beautiful Starry Windflower of the Pyrenees, etc. This, with its rich dazzling scarlet flowers, and light elegant growth, is the most brilliant and graceful of all Winter- and Spring-flowering Anemones, and should be used largely in wild gardens, orehards, woodlands, on banks, etc. The cut flowers are invaluable for table bouquets or vases, as they last a long time in water. If planted early in Autumn, flowers may be gathered, weather permitting, from Christmas; its hardiness is beyond all question, and the roots may be safely planted any month from August to February, in a position protected from ground winds and with a sunny or S.W. aspect.

Anemone fulgens likes a well-drained rich soil (rather dry by preference). Never plant the roots while the ground is wet.

ANEMONE BLANDA

Daffodils are naturalised the following Anemones should be freely planted :-Anemone apennina, the blue Mountain Windflower, forms a dense cushion of rich blue, and is one of the loveliest of dwarf Spring flowers. A. blanda resembles A. apennina in flower, but blooms a month earlier. The varieties of Anemone nemorosa (the true Wood Anemone) literally earpet the ground with their charming flowers; being shade-loving plants, they should be planted under trees or in shady nooks on rockwork; while naturalised in grass they present a pieture full of grace and beauty. A. nemorosa Robinsoniana is remarkanty beautiful. All are exceedingly charming established on rockwork, or as pot-plants. A. palmata likes a damp spot during summer. For other beautiful Anemones, see our Hardy Plant Catalogue.

CALLA, or Arum Lily. See Richardia.

CALOCHORTUS, or more popularly known as the Butterfly or Mariposa Tulips, Globe Tulips and Star Tulips. These levely Californian bulbs, although belonging to the same Natural Order

GROUP OF MARIPOSA TULIPS.

as the Tulips of our gardens, bear little resemblance to them. They flower through June and July, and for delicacy of texture and brilliancy of colour are unsurpassed; they deserve a place in every hardy flower border and rock garden.

As cut flowers the Calochorti are of great value, the flowers lasting well and the buds opening readily in water; the varieties in the Mariposa or Butterfly section are especially suitable to cut, having long stems and being profuse continuous bloomers.

They all make charming pot-plants (several bulbs in a pot) for the cool

greenhouse or Cape pit.

CULTURE OUTDOORS.—The Calo-chorti are all quite hardy. The "Mari-posa" and "Star Tulips" require a sunny position and light gritty or sandy soil on slightly raised beds to ensure perfect drainage; plant from September to end of November, 2 to 3 inches deep, and 3 inches apart. Cover the beds after planting with straw or cut heather, to keep surface sweet and as a protection in case of early growth; remove the covering in March. A position facing south and sunny spots on the rockery are specially suitable. When in full growth give occasional soakings of water, but not too frequently. After flowering, ripen off by placing glass over them, and take up when foliage dies down.

The "Globe Tulips," being woodland plants, like partial shade and a porous soil composed principally of leaf mould.

CALOCHORTUS -continued.

** In the following List the numbers after the names indicate their relative order in time of flowering: thus those marked (1) are the earliest to bloom, and those marked (6) the latest. The heights we give are an average; under exceptionally good or poor conditions the plants may grow taller or dwarfer.

average; under exceptionally good or poor conditions the plants may grow taller or dwarfer.		
section I.—Butterfly or Mariposa Tulips, all of remarkable beauty, with large open flowers.	<i>s</i> .	d
Catalinæ (2), the earliest of all the Mariposa Tulips, bearing on tall slender stems very beautiful large flowers ranging from pale to deep lilac, with a dark maroon circle at base, ht. 16 to 24 in	0	8
Gunnisoni (4), large pure white expanded flowers, with an inner hairy zone of green and gold, petals shaded outside green and azure, of great beauty, ht. 18 to 24 in., fine for cutting. AWARD OF MERIT R.H.S	0	8
Kennedyi, a most lovely species, although a little difficult to grow; the flowers are of a brilliant brick-scarlet with black central blotches, ht. 6 to 12 in. Plant in a warm sunny situation in a stony or gravelly soil	I	6
Leichtlini, a pretty species from the Sierras, found growing at an elevation of 5,000 to

  CANNAS. See our Spring Catalogue of Bulbs and Tubers.
  CHINESE SACRED LILY. See Narcissus Polyanthus, page 63.
  CHIONODOXA (Glory of the Snow). The Chionodoxa is one of our earliest as well as
      loveliest Spring flowers, and in very early Spring its sheets of blue are a great attraction in the garden. It should be largely used in borders and dotted over bulb beds, also massed on rockwork.
      Once planted it comes up year after year, the flower spikes increasing in size and beauty each season. If grown in pots and jardinets the Chionodoxa may be had in bloom early in January,
      but should be brought on in a cold frame or cool greenhouse close to the glass. When associated
      with Narcissus minimus, the effect is very charming. For an effect the first season, plant the bulbs
      close together.
    Lucilize (The Glory of the Snow), colour deep Nemophila-blue, with clear snow-white centre
                                                             per 1000, 40/-; per 100, 4/6; per doz. 8d.
       ,, rosea, flowers ranging in delicate shades of rose and rose-lilac, beautiful
                                                                               per doz. 15/-; each 1s. 6d.
    sardensis, one of those rare flowers of a true Gentian-blue, and so striking that for distant effect it cannot be too highly recommended. FIRST-CLASS CERTIFICATE R.H.S.

CROCUSES.

The Crocus is one of the earliest flowers of Spring, and occupies a deservedly prominent place in every garden. Planted as an edging in triple lines of one or more colours, the effect is striking. No Spring display surpasses that of broad wavy bands of golden-yellow, striped, purple, or pure white Crocuses when they expand their blossoms, in February and March. In lawns and pleasure parks, planted in the grass, Crocuses are extremely effective. In wild gardens, woodland walks, etc., the Crocus should be associated with the violet, the primrose, and the oxlip.

For outdoors plant as *shallow as possible*, barely covering the bulb; many amateurs plant too deeply, which is often the cause of failure in their blooming. Early plantings give the best results.

BARR'S CHEAP SHOWY CROCUSES for Large Plantings.

For a gorgeous effect in early Spring nothing can equal the Golden-Yellow Crocus, large masses of which attract the eye at a great distance. The value of the larger sized bulbs of Yellow Crocuses is that they produce more flowers to a bulb, and are therefore more decorative.

BARR'S CHOICE NAMED LARGE-FLOWERED CROCUSES. Large Bulbs for Pot-Culture and Flower Beds, etc.

The following large-flowered named Crocuses are the best in cultivation, and we can confidently recommend them for planting in groups, edgings, select beds, and in designs. To obtain the finest effect the bulbs should be planted an inch apart. When grown in pots, plant thickly, and plunge pots in ashes only up to the rims. When removed from under the ashes, place in an airy situation, and give water very freely at the roots. A charming effect is obtained by growing Crocuses in shallow sauccrs, using Barr's Fertilised Cocoa Fibre Mixture, or Pebbles and water (the bulbs touching one another), and this may be accomplished in an ordinary sitting-room.

CROCUSES.

BARR'S AUTUMN-, WINTER- AND SPRING-FLOWERING SPECIES.

No hardy garden is complete without these floral gems, which carry on a continual display of bloom from August to March, and light up the garden with their bright colours in winter when few other plants are flowering. On rockwork and in grass they form a charming picture, while in pots they make a very pretty effect. In nomenclature we have followed Mr. George Maw's Monograph on the Croci. The delightful effect produced by masses of C. speciosus, C. longiflorus, C. sativus, C. Tommasinianus, etc., when naturalised, can only be realised by those who have witnessed it.

CULTURAL DIRECTIONS.—Any ordinary garden soil suits these Crocuses. Plant the bulbs as early as possible, and very shallow, barely covering them with soil.

Selections of Autumn-, Winter-, and Spring-flowering Species.

A Full Descriptive List of our Crocus Species, with their native habitats given, may be had on application.

CROCUSES-AUTUMN-, WINTER- AND SPRING-FLOWERING SPECIES -continued.

The few species quoted in the following list are mostly those we can offer cheaply in quantity, and we can strongly recommend them for naturalising and massing on rockwork, in grass, etc., where their beauty will delight the eye from Autumn till early Spring.

CYCLAMEN Persicum, for Greenhou	se, Large-Flowered Strain, a great improvement
on the old strain a plants are of five compact b	ashit with flowers large of rich and delicate colours

CYCLAMEN Persicum, for Greenhouse, Large-Flowered Strain, a great improvement on the old strain; plants are of fine compact habit, with flowers large, of rich and delicate colours, and standing well above the handsome foliage.

Plants in Pots set with bud or in bloom, supplied from September to December—per doz. 15/-, 21/-, 25/-, and 30/-; each 1/6, 2/-, 2/6, 3/6, and 5/6, according to size.

CYCLAMEN. Hardy Species for Rockwork Out-of-Doors.

These Hardy Cyclamen require perfect drainage, and shelter from the cutting winds of March and April, and the hot rays of the Summer sun; at the bottom of old walls facing north and on rockwork they are very beautiful, while, nestling in the grass, near the roots and under the shelter of old trees, they

each-s. d

CYCLAMEN, HARDY SPECIES-continued.

produce a most charming effect. In making up a soil for the hardy Cyclamen, add a liberal proportion of old line or mortar rubbish and some old peat or leaf soil. C. Europeum is fragrant, and flowers August to September. Ibericum and Coum varieties bloom in Spring; Repandum closes the Cyclamen season in April. Repandum and Africanum should, in cold districts, be planted in warm protected situations on rockwork, and covered with cut heather, straw, or a few light boughs, to keep off cutting ground winds till March. They may also with advantage be grown in cold frames.

Cyclamen neapolitanum is perfectly hardy, and is covered with bloom during September, while from Autumn to Spring its large and beautifully variegated leaves render it valuable for Winter beds, intermixed

with Scillas, Chionodoxas, Leucojums, Miniature Daffodils, Snowdrops, Muscaris, etc.

Hardy Cyclamen, Autumn-, Winter- and Spring-Flowering. 12 varieties, 3 roots of each, 25/- | 12 varieties, 1 root of each, 9/-

  ERYTHRONIUM White Beauty. See Novelty List, page 5.
  EUCHARIS amazonica (The White Amazon Lily), the snow-white flowers of this handsome stove-plant are deliciously fragrant, and arc much used for bouquets and wreaths,
       ht. 1½ ft. We can offer fine well-grown healthy plants free from mite, as follows:—

Strong flowering single bulbs, established in pots, per doz. 21/-; each 2/-
       Established pots of several bulbs...per pot, 7/6. Fine specimen plants...each 10/6, 15/- & 42/-
× EUCOMIS punctata, a handsome Autumn-flowering plant, with spotted foliage and long
       spikes of wax-like white starry flowers spotted rose, very fragrant, ht. 2 ft. ' Plant out of doors
       in March or April in a rich light soil and sunny situation, or pot up earlier for indoor decoration; in Autumn lift the tubers and store in dry soil during winter .......per doz. 7/6
                   Freesias are prized for their delightfully fragrant graceful flowers, which last
      longer in water than almost any other flower. They are easily grown, and may be forced into bloom by Christmas if required. Plant the bulbs in September and October, 6 in a 5-inch pot, or 12 in a 7-inch pot makes a better display. The tops of the bulbs should be
       buried 2 inches below the surface of the soil, which should be a compost of good incllow
       loam, well-decayed farmyard manure and a little bonemeal. Care must be taken that there
       is good drainage. Stand the pots outside on a sunny border and keep them slightly shaded
       until growth is showing, when expose them to full sun. About the end of October, or before
       severe frost comes on, remove the pots to the sunny part of a greenhouse and give plenty of
      air (not draught). Or they may be placed in an airy, sunny window, care being taken not to expose them to draught or the drying heat arising from gas. When the flower buds are
       opening, a little weak liquid manure water will be found beneficial.
    Leichtlini major (true), primrose, with orange blotch, 12 ft., per 100, 6/6; per doz. 1/-

Armstrongi (The Pink Freesia), Chapmanii (new), and Tubergeni (new). See Novelty List, page 6.

FRITILLARIA, an extremely elegant family of hardy shade-loving plants, bearing graceful

A GROUP OF FRITILLARIA MELEAGRIS (Very much reduced).

drooping bell-shaped flowers in May. The large-flowered varieties are charming for grouping in borders and for clumps on rockwork; while the smallerflowered dwarf kinds are gems for select nooks on the rockery. All are delightful subjects for naturalising in grass in shady glens or under large trees. A little sharp sand placed around the balbs at time of planting is very beneficial. As pot plants (several in a pot) they are very pretty. The new varieties of Meleagris are very fine.

FRITILLARIA imperialis—the Crown Imperial.

FRITILLARIA IMPERIALIS (CROWN IMPERIAL).

The Crown Imperial (Fritlllaria imperialis) is a stately hardy border-plant, very effective in Spring. Its tall, stout, leafy stem terminates in a cluster of large drooping bell-shaped flowers, surmounted by a whorl of fresh green leaves. For forming bold groups in the permanent border or on lawns it is of great value, and should be allowed to remain undisturbed. To obtain the best success, plant the bulbs in September and by preference on their sides, to prevent moisture accumulating in the centre. We offer specially strong selected bulbs, superior to what are usually sold, and which we hope will all bloom the first season. The Crown Imperial, however, is a plant which is always better the second year of planting.

Deep Orange-red, very showy, ht. 3 ft......pcr, doz. 4/6 o 5

Large Yellow, bearing large handsome yellow flowers, ht. 3½ ft. per doz. 8/6 Mixed, various shades, suitable for naturalising

strong selected bulbs, per doz. 6/6 -

GALANTHUS (Snowdrop).

In the early Spring months there is nothing more beautiful than a sheet of the snowy graceful blossoms of the SNOWDROP. In planting, the bulbs should almost touch each other. An effect of surpassing beauty may be obtained by associating SNOWDROPS with SCILLAS SIBIRICA and BIFOLIA, CHIONODOXAS, WINTER ACONITES, etc. Where possible such plantings should be permanent, and the surface of the soil top-dressed in Summer and sown with annuals, such as Nemophila, Leptosiphon, etc., or planted with surface-rooting bedding plants. The SNOWDROP and CROCUS when planted in alternate circles are very effective, and follow each other so closely that no gap is left in the succession.

GALANTHUS-continued.

The SNOWDROP looks charming when nestling in grass, on hedge banks, etc. The turf need not be disturbed if Barr's Bulb Planter he used (see page 91); this cuts out clean holes large enough to take two or three bulbs. The Giant Single Snowdrop, GALANTHUS ELWESH, should be extensively used; its flowers are large and valuable for cutting. In its wild state it is found growing with the CHIONODOXA, and the two associated together present a lovely picture.

Permanent plantings of Snowdrops should be made as far as possible in shady situations.

					5.	d.	S	d.		s.	d

VARIOUS BEAUTIFUL SPECIES OF SNOWDROPS.

GALANTHUS WHITTALLI (Much reduced).

2.5

These are all beautiful, and clumps planted on the border or on rockwork will afford much pleasure to lovers of hardy flowers.

Elwesii var. Cassaba, a strong grower with handsome light glaucous green erect foliage, and handsome well-formed globular snowy white flowers with inner segments coloured bright green except a small part above the mouth

per 100, 15/-; per doz. Fosteri, a fine tall distinct species, with handsome broad bright glossy green foliage, flowers snowy white, large, and fairly long, the inner segments being coloured rich green except just

plant in the shelter of shrubs and leave undisturbed

per 1000, 50/-; per 100, 5/6; per doz. lkariæ, a most lovely Snowdrop, with broad glossy light green foliage, gracefully recurving, and elegant globular snowy white flowers, inner segments marked half way up from mouth bright green......per 1000, 55/-; per 100, 6/-; per doz.

extra large bulbs, per 100, 8/6 0 10

latifolius (Redoutei), a distinct species from the Caucasus, with broad light green foliage

plicatus (The Giant Crimean Single Snowdrop), a tall-growing species having distinct broad plicate foliage; flowers large, the inner segments having a broad dark green blotch at tips

large bulbs, per 100, 21/-; per doz. robustus, a very handsome tall-growing Snow-drop, with broad glaueous foliage and large globular snowy white flowers

per 100, 12/6; per doz. 9

3

Whittalli, a grand new Snowdrop, taller and more robust than Elwesii, while the blooms are inclined to be larger and of a fine globular form; the foliage is broad and handsome, of a rich glaucous-greenper 100, 10/6; per doz. extra large bulbs 15/-;

* GALTONIA candicans (Hyacinthus candicans), the Great Snow-White Summer-flowering Hyacinth, growing 3 to 6 ft. high, according to soil and situation, and bearing a spike of 20 to 50 pure white bell-shaped flowers; a handsome decorative plant for grouping in the flower border or on lawns, also a fine pot-plant for the conservatory. Very effective when grouped with the scarlet Gladiolus Brenchleyensis. Plant from October to March, covering the Autumn plantings with a little litter for the first winter. Strong bulbs, per 100, 5/6; per doz. -/10. Extra large bulbs, per 100, 7/6; per doz. 1

GASTRONEMA. See Cyrtanthus.

GEISSORHIZA Rochensis, a Cape bulb of exquisite beauty, bearing in June intense Tyrian blue flowers with rich crimson blotches in centre; a little gem for pot-culture and sunny nooks on rockwork, ht. \(\frac{a}{4}\) ft.......per doz. \(\tau/6\); each

GELASINE azurea, a beautiful South American bulbous plant, producing in early summer umbels of lovely dccp blue flowers, ht. 1 ft.; heep the bulbs dry during winter, per doz. 8/6; each

GERANIUM tuberosum (Tuberous-rooted Crane's-bill), an elegant creeping plant bearing several violet-rose flowers in Summer; hardy in sunny spots on rockwork

GERBERA Jamesoni. See Novelty List, page 6.

GESNERAS, a very beautiful family of greenhouse plants requiring similar treatment to the Achimenes; their handsome velvety foliage and elegant spikes of brilliantly coloured flowers render them objects of great beauty.
 12 beautiful kinds, 10/6; 6 ditto, 5/6

×GLADIOLUS.

BARR'S EARLY-FLOWERING VARIETIES.

For Autumn and Winter Planting.

EARLY-FLOWERING GLADIOLUS "BLUSHING BRIDE"
(Much reduced).

These beautiful Early-flowering Giadioii should be largely planted for supplying cut bloom from May to July; and for the fine effect they produce in the flower garden. G. Colvillei The Bride is extensively grown in pots and boxes for cutting during April, May, and June. All may be grown in pots for indoor decoration.

per 100, 5/6; per doz. 0 10

CULTURE OUTDOORS.—Sclect a situation protected from cutting winds and shaded from the midday sun. Decply dig the ground, working in plenty of rotten manure in the underspit, and sec that the soil is made light and friable; plant the bulbs from October 10 January, at a depth of four to five inches, and in the case of the later plantings soak the bulbs in water a few hours before putting them in the ground. Before severe frost comes on cover with a little long straw litter or other light material, which remove in March. Gladiolus byzantinus and the Colvellei varieties are best planted in October or early in November. If the Summer is dry and the weather hot, give an occasional good soaking of water or weak liquid manure. A mulching of well-decayed manure in early summer will considerably benefit the plants.

CULTURE FOR CONSERVATORY DECORATION.—Plant three to five bulbs, according to size, in a 5-or 6-inch pot, and plunge in ashes up to the rim of the pot in a cold frame or pit, withholding water till the bulbs have started into growth; oz, the pots may be buried up to the rim in ashes out of doors under a south wall, a light covering being given during severe frost. When the plants are in bud they may be removed to the conservatory or greenhouse.

BARR'S CHOICE NAMED HYACINTHS.

orange-red flowers with yellow centre, measuring 2½ inches across, ht. 2 ft., cultural treatment

.....per 100, 5/6; per doz. 10d.

For Glasses, Jardinets, Bowls, Pots, and for Exhibition.

Culture in Pots.—The soil should be a compost of good fibrous loam with a liberal addition of leaf-soil, sharp sand, and thoroughly well-decayed cow manure. Phytobroma (see page 92) may also be added at the rate of 1 lb. per bushel. The compost should be well mixed and left to stand some time

before being used. New pots should be well soaked in water before use.

In potting, barely cover the bulb, and let the soil be \(^3\) in. below the rim of the pot, to allow for watering. After potting give one good watering and then place the pots outdoors on a bed of ashes, cover with six inches of cocoa fibre, and leave them exposed to all weathers. When the bulbs have well reoted, and made about an inch of top growth, they may be removed indoors, first into a subdued light, until the blanched foliage has attained its full green colour, and then into the sunniest situation at command in the greenhouse or conservatory. It is a good plan to place an inverted flower pot over the young growths for a few days after being removed from the plunging bed, as by so doing they are protected from possible draught. Abundance of air, a moderately moist atmosphere, and plenty of water at the roots are then necessary for early well-developed flower-spikes. A dry or frosty atmosphere or a draughty situation will cause the flower-buds to shrivel. Forcing should only be done gently, the temperature not exceeding 60 degrees. A too frequent fault made in forcing Hyacinths is that they are subjected to heat before the bulbs are fully rooted.

For earliest flowers—namely, for January and February—pot middle of September and leave in the plunging bed 10 to 12 weeks.

If finely developed trusses and rich colours are preferred to very early flowers, the Hyacinth should not be forced; pot up the bulbs middle of October and leave them plunged out of doors three months or more, according to season, then remove them to a mild temperature like that of a cool greenhouse, a sitting-room window, or frame, always selecting the sunnicst and most genial situation.

Culture in Glasses.—We recommend only Single Hyacinths for glasses. The most reliable sorts for growing in glasses we have indicated by Ψ . Pure clean water (rain-water by preference) the same temperature as the room should be used, with a piece or two of pure wood charcoal in it. The bulh can be made secure in the glass by a piece of fish netting, and its base should at all times just touch the water. Place the glasses in a cool dark place to encourage root growth, and keep supplied with water as required. When nearly full of roots (not before), and an inch or two of top growth has been made, admit them to the light gradually, and then to the sunniest place at command where there is full light and an even airy temperature. Avoid a too dry or frosty atmosphere or a draughty situation, as such conditions will often cause the flower-buds to shrivel up. A little rain-water gently sprinkled daily on the green flower-spikes will assist in their development. Barr's Fertilised Fibre and Charcoal Mixture is an excellent material for growing Hyacinths in, and is clean and inoffensive to handle (see page 2 for directions).

Culture in Jardinets.—For this purpose Barr's Fertilised Fibre and Charcoal Mixture is undoubtedly the best material to use. It should be always kept moist, and when the jardinet is removed to the sitting-room the surface should be covered with fresh green carpet moss or mossy Saxifrage. Grown in jardinets, Hyacinths are charming when associated with early Spring-flowering bulbs like Chionodoxas, Scilla sibirica, Snowdrops, Tulips, Crocuses, Narcissi, Iris reticulata, etc.

Hanging Moss Balls of Hyacinths.—Very charming hanging baskets of Hyacinths can be made with balls of fresh Sphagnum moss, 9 inches in diameter. First make up a ball of moss about 8 inches in diameter, into which insert the Hyacinth bulbs all round, binding them in with string and more moss so that only their points are visible. Then run a wire through by which the ball can be suspended in greenhouse or sitting-room window. No more attention will be required except to dip the ball in water about once a fortnight. Such hanging baskets can be effectively made with Named or Bedding Hyacinths, and also with Roman Hyacinths. The open wirework baskets which are sold can be filled in the same way.

BARR'S NEW "PRIZE-WINNING" EXHIBITION HYACINTHS.

A very careful selection of a few of the finest Hyacinths for Exhibitors.

We have selected these varieties out of many hundreds, as being specially suitable for exhibition on account of their grand spikes of fine form, their large bells and beautiful colours. Several of them are new varieties, and a great advancement on existing kinds. Most of them have been awarded prizes and certificates of merit.

 Ψ indicates those sorts which should be selected where the bulbs are required for growing in glasses.

BARR'S FIRST-SIZE NAMED HYACINTHS.

Bulbs the Finest of the Season's Crop.

The varieties of Hyacinths described below, and included in the following solections, we have personally selected during our many visits of inspection to the Finest Hyacinth Farms in Holland, and experience has proved them the most worthy of cultivation.

For the convenience of buyers we have indicated the relative earliness or lateness of the various kinds by (1), (2), (3), (4): thus those marked (1) are the first to bloom, those marked (4) are the latest.

View of a Hyacinth Farm where our Hyacinths are specially grown.

BARR'S "Extra Selected" BEDDING HYACINTHS. For Bedding, Boxes, Bowls, or Pot-Culture.

The following Hyacinths are of an extra selected quality, and far superior to what are commonly sold as "Bedding Hyacinths" at lower prices. The varieties selected are those having large erect well-formed spikes of uniform height and rich brilliant colours, and only differ from the named Exhibition Hyacinths in the bulbs being a shade smaller in size. They may also be used with advantage for filling flower boxes, rustic baskets and vases, etc., and for making into hanging baskets (see page 35). As some varieties open a little earlier than others, we have classified them into two sections—(1) Those which commence to flower first and about the same time, and (2) those which come to perfection a little later, and bloom about the same time. We trust this arrangement will be of assistance to purchasers in making their selection.

CF* Orders should be sent in early to secure finest bulbs.

SECTION 1.—Varieties coming first to perfection, and which may be bedded together.

BARR'S "RAINBOW" MIXTURES OF HYACINTHS.

For Filling Beds and Planting in Borders, etc.

Barr's Beautiful "Rainbow" Mixture of Hyacinths. These are grown specially for us on one of the large Hyacinth Farms in Holland, and are unsurpassed for quality. The colours are judiciously blended, including red, scarlet, purple, lavender, parcelain, acure-blue, white, rose, blush, etc., producing a magnificent effect in flower beds and borders. Purchasers cannot fail to be pleased with them.

Extra strong flowering bulbs, per 100, 17/6: per doz. 2/6

BARR'S MINIATURE HYACINTHS for Children's Gardens, etc.

In children's gard-ns and small flower-beds, or as front edgings and ribbons, these **Miniature Hyacinths**, alone or intermingled with other dwarf Spring-flowering bulbs, make a fine display throughout the Spring months. They are also valuable for growing in small glasses, fancy pots, china bowls, crystal dishes, jardinets, etc., alone or associated with Scilla sibirica, Chionodoxas, Crocuses, Snowdrops, Dwarf Tulips and Daffodils, Iris reticulata, etc. For cultural directions, see page 35.

Barr's Special Mixture of beautiful colours, per 100, 12/6; per doz. 1/9 Collection of 3 Bulbs each of 9 distinct colours, 5/-

EXTRA Selected French-grown Bulbs.

This charming little Hyacinth is of great value for early forcing, and may be had in bloom during November, December, and January by successional plantings. Several bulbs in a pot make a charming Winter decoration for the greenhouse or sitting-room, while to cut for bouquets and vases the graceful spikes of sweet-scented blooms are highly prized. The Roman and Italian Hyacinths lend themselves readily to culture in bowls of pebbles and water or our fertilised cocoa-fibre and charcoal mixture. (For Cultural Directions, see page 1.)

Barr's "Extra Early" WHITE ROMAN HYACINTH,

BARR'S EXTRA EARLY ROMAN HYACINTHS GROWN IN BOWL OF PEBBLES AND WATER.

These Extra Early White Roman Hyacinths have been grown specially for us in a warm climate, and have thereby gained a superiority over the French-grown Roman IIyacinths in flowering three weeks or more earlier, and generally more freely. The elegant little sweet-seented flower-spikes may be had in bloom during October, November, and December, if the bulbs are potted up early and forced in succession. They are greatly prized for bouquets, while the individual flowers are of great value for buttonholes. Grown in bowls of pebbles and water or our prepared cocoa-fibre and charcoal mixture, they afford a charming decoration for the greenhouse or sitting-room. (For Cultural Directions, see page 2.) The supply of these Extra Early White Roman Hyacinths is limited.

Extra Strong Selected Bulbs, per 100, 30/-; per dox. 4 0 Strong Selected Bulbs......, , 21/-; ,, 3 0

ITALIAN EARLY HYACINTHS.

These bloom just after the White Roman Hyacinth, and are therefore valuable for succession. They are all of graceful beauty, and may be had in bloom in December and January. These Italian Hyacinths can easily be grown in owls of pebbles and water or our prepared cocoa-fibre and charocal mixture, and make a very pretty decoration for the greenhouse and sitting-room.

IRISES.

These may be called the "Orchids" of the flower garden, their blossoms competing in richness and variety of colour with the choicest and the most beautiful Orchids. They should be extensively planted in flower and shruhbery borders, and naturalised; a judicious selection will give a display of bloom from Christmas to August. See our Hardy Plant Catalogue for all kinds of Flag Irises.

BARR'S ENGLISH IRIS (I. xiphioides).

The Large June-flowering Bulbous Iris of the Pyrenees.

GROUP OF ENGLISH IRISES (Very much reduced).

These magnificent Irises thrive in any ordinary garden soil. The earlier the planting, after beginning of September, the greater the success, although the bulbs may be put in as late as December. The varieties contained in our collection we have specially selected as being the finest and most distinct, and they will be found as strikingly beautiful in colour as the most sumptuous Orchids of the hothouse. They flower from end of June to beginning of July, thus succeeding the Bearded Flag Irises and Spanish Irises. As cut flowers they take a first place.

Our collection of English Irises is the finest one existing.

Barr's Extra Choice Mixed varieties, producing a lovely effect in beds and borders, per 1000, 70/-; p. 100, 7/6; p. doz. I 3

(3) In the following descriptions S. is used to signify Standards or the erect petals; F. Falls, or the drooping petals. The heights given are those recorded at our Nurseries, but they may differ a little according to soil, season, and climate.

The numbers following the name indicate the relative time of flowering; thus those marked (1) open first, while those marked (4) are the latest to bloom; the difference, however, is only one of days.

DADDIC CDANIOLI IDIO (L. 1. M. L.			

BARR'S SPANISH IRIS (Iris Xiphion).

The Orchid-like June-flowering Bulbous Iris of Spain.

GROUP OF SPANISH IRISES (Very much reduced).

The Spanish Irises flower a fortnight before the English, and differ from them considerably, the colours of the flowers being showier and more varied. The curious and charming blendings of shades in the same flower give them the appearance of many of our rare orchids, with which they can well compete in grace and beauty. For vases and bouquets the cut flowers are greatly prized, as they last long when cut, and the buds open well in water. For filling flower-beds and massing in borders these elegant Irises are of the greatest value. The varieties contained in our collection are the finest and most distinct in cultivation. The cultural treatment is the same as for the English Iris, while they will thrive either in an open or partially shaded situation. This Iris will also bear very gentle forcing in pots, but this should not be attempted until the flower buds are developing.

VARIOUS BEAUTIFUL IRISES.

Bulbous, Tuberous, and Rhizomatous.

THESE IRIS SPECIES are all hardy and beautiful, flowering one after the other from November to June. The dwarf early species will be more enjoyed if planted on rockwork, where the flowers have a little protection from heavy rains. Alata, Reticulata var. Histrio and Histrioides, Vartani, and Unguicularis (Stylosa) vars., are charming Winter-flowering species, followed in February by I. reticulata, with its lovely violet-scented blossoms, the sweet-scented I. persica, and the beautiful species I. Rosenbachiana. Next in succession come the interesting Caucasica, Orchioides, the curious Snakeshead Iris tuberosa, and the new species I. Sindjarensis and assyriaca. These are followed closely by the Cushion Irises, with their large handsome flowers; surpassing in beauty and interest any written description that can be given of them. The pretty Peacock Iris (I. pavonia) and the beautiful Iris cristata flower in May, and are followed in June by juncea, Boissieri, lusitanica, and tingitana.

Culture.—The Irises marked Θ in the following list belong to the *Oncocyclus* and *Regelia* sections (Cushion Irises), and are remarkable for their great beauty. These are best planted in December, if the roots can be kept in good condition and from growing until that time (they should be stored in a cool and dry place). Plant so that the tops are not more than $1\frac{1}{2}$ inches below the surface, in a light loamy but thoroughly well-drained soil into which plenty of bonemeal has been worked (5 lb. to the square yard); cover with three or four inches of wheat straw or, better still, marsh reeds, or cut heather, which remove in March. Immediately the plants have done flowering place over them a hand light, or panes of glass elevated eighteen inches above the ground, so as to admit at the sides a free entry of air, and at the same time to keep off rain till October. The object desired is to thoroughly ripen the roots, and prevent their starting into growth too early. The covering in Winter is to keep off heavy rains, and discourage a premature growth. The Oncocyclus Irises like to remain undisturbed for years; they may however be lifted four or five weeks after flowering, and stored on a dry sunny shelf in perfectly dry sand till December. The great beauty of these Irises, especially when seen in established masses, will fully repay the little extra trouble in growing them.

The Irises marked † belong to the Juno section, and thrive best planted in rich light or sandy soil with a light dressing of old manure. As they are mostly winter and early spring-flowering species give them a position protected from the early morning sun.

(Coloured Plate of the Oncocyclus Irises, Gatesii, Lorteti, and Lupina, price 6d. Coloured Plate of Irises, Atrofusca, Bismarckiana, Atropurpurea, and Helenæ, price 6d.)

BARR'S FLAG IRISES. Tall Bearded, Dwarf Bearded, and Japanese, etc.

These beautiful Irises form a great feature in our cultures. They supply a floral decoration from March to July. Plant in Autumn—for full descriptive list, see our HARDY PLANT CATALOGUE.

IXIA.—The African Corn Lily.

A most graceful plant, bearing on wiry stems 15 to 21 inches high long loose racemes of bloom of remarkably rich and varied colours. All have a brilliant dark centre, and in the sun's rays present a picture of gorgeous beauty.

CULTURE IN POTS.—From October to January plant five or six bulbs in a four- or five-inch pot, using a compost of turfy loam, leaf soil, and silver sand. Make the soil firm about the bulbs, and plunge the pots, up to the rim only, in ashes in a cold pit or frame, or under a south wall. Until a little top growth has been made no water should be given, and then only sparingly at first. When the plants are in growth, the lights should be left off except during wet or frosty weather. Early in February, or when sufficient growth has been made, remove the plants to the greenhouse, keep close to the glass, and carefully attend to the watering.

CULTURE OUTDOORS.—Plant from November to January, at a depth of three inches, and the bulbs two inches apart, on raised beds, in a prepared light loamy soil, in a sunny situation, protected if possible from cold east and northerly winds. When planting cover the bulbs with coarse sand. A covering of straw, litter, heather, or other light material, will protect the early top growth from frosty winds, but it should be removed in March.

LEUCOJUM (Snowflake).		

LEUCOJUM (Snowflake). (Spring-, Summer-, and Autumn-Flowering.)

Leucojum vernum, the Spring Snowslake, is one of the earliest and most beautiful Spring flowers, handsome in outline and of elegant drooping habit. L. astivum and Hernandezii, the Summer Snowslakes, flower in April and May, and their elegant blossoms are prized for bouquets. L. autumnale and roseum are charming little graceful Snowslakes, blooming in August and September; they are best planted in pure sand. L. trichophyluum resembles Autumnale in its graceful flowers, but blooms in Spring; plant in pure sand, and give cold frame treatment, keeping it well moist while in growth. All the Snowslakes delight in shady situations.

LEUCOJUM -continued.

LEUCOJUM VERNUM CARPATHIC

each-s. autumnale (Acis), white and pink flowers in Autumn, graecful in pots and on roekwork, etc., ht. 4 in.; grow

ht. 4 in.per doz. 7/6
vernum carpathicum, the Spring Snowflake, a robust-growing variety of this favourite little flower; prized for its pretty white bell-shaped flowers in early Spring; valuable for edgings, masses at foot of rockwork, and for naturalising in grass, etc. (See illustration) per 1000, 60/-; per 100, 6/6; per doz. 1/-

BARR'S BEAUTIFUL LILIES,

For Naturalising in Flower and Shrubbery Borders, and for Greenhouse Decoration.

It may be truly said that for chasteness and beauty of colour and form, the Lily stands pre-eminent amongst hardy plants. By a judicious selection of species from different countries a continuous succession

of bloom ean be maintained from May to October.

Many amateurs have feared to introduce into their gardens these beautiful flowers, imagining that their culture was too difficult, and beyond them. This, however, is not so. There are varieties which are of the simplest culture, such as *Speciosum*, *Tigrinum*, *Elegans*, *Umbellatum*, and the old Cottage Garden Lilies—Candidum and Croccum. Others require only a little attention as to soil and position, which ean be arranged for in most gardens.

In the following list we have indicated in a general way the conditions most suitable for growing the different species to ensure success, and we strongly recommend all who have a love for their gardens to have this beautiful family of plants well represented in their borders.

General Hints on Culture.

Lilies planted out.—The conditions essential to suecess in growing Lilies may be generally summarised thus :-

A cool rooting medium; Perfect drainage; and Shade from hot sun.

These conditions can be readily fulfilled in the borders of Rhododendron and Azalea beds, or amongst the various subjects grown in the herbaceous and shrubbery border. In such positions the young Spring growths are protected from cold winds, and the ground is kept shaded and cool by the shade of the surrounding plants. This is especially needful in the case of those Lilies which make stem roots, as these are only developed freely in shade. On these roots, which are produced at the base of the stem, the flower-head largely depends for its successful development, and the bulb for its preservation. As soon as they appear a light covering of good rich soil should be given, into which they can root freely. The chief stem-rooting Lilies are indicated in the following list by δ . There are others which are less dependent on these stem roots, which they only produce when the bulbs are

planted on rich soil and in shade.

In preparing the ground for Lilies loosen the soil to a depth of 2 feet or more, and add or fill in the necessary compost (see notes below). Plant the bulbs 2 to 3 inches deep, surrounding and covering them with sand, and then top-dress with a compost of light soil and well-decayed manure. As growth

advances a mulehing of light rich soil should be occasionally given. During the growing period Lilies should be freely watered.

In late autumn cut down the old flower-stems and give a light covering of leaves or cocoa fibre.

LILIES—continued.

The Bog or Swamp Lilies-like Superbum, Canadense, and Pardalinum-revel in plenty of moisture and are admirable subjects for the sides of brooks, rivulets, ponds, etc.

Lilies in Pots.—Any one with an unheated greenhouse can easily have a very beautiful show of Lilies in pots during the summer months. The varieties specially recommended for this culture are Auratum, Speciosum, Tigrinum, Chalcedonicum, Umbellatum, Elegans, Testaceum, Hansoni,

Henryi, Giganteum, Brownii, Longiftorum, Krameri, Rubellum, etc.
In potting use a compost of fibrous loam and sweet decomposed leaf soil, with plenty of coarse sand or a mixture of good peat, loam, and sand. See that the drainage is perfect and the inside of the pot clean to start with. Pot firmly, barely covering the top of the bulb, and leaving room to add more soil when the surface roots appear. Select a situation out of doors, protected from the afternoon sun, and stand the pots on a bed of ashes raised above the general level to avoid stagnant moisture, and make firm to prevent the entrance of worms; then cover with 6 inches of cocon-fibre or old leaf soil to keep off excessive rains. When top growth begins to show above the covering, remove the pots to a cold frame, pit, or greenhouse, and start giving water sparingly; a little clear weak liquid manure given twice a week when the flower-buds are well advanced will greatly assist in the development of fine blooms. A north wall or hedge is a suitable situation for starting the bulbs. If very early flowers are required the plants may be transferred from the cold frame into a gentle heat, but must be kept as near the glass as possible to prevent them from being drawn. Shade should be given to the lower portion of the stems to induce free stem-roots, and these should be top dressed as they appear. Give air freely, and fumigate if required. When coming into bloom a little weak manure-water will be of great assistance to the plants.

To those desiring further information regarding Lilies, we commend Dr. Wallace's "Notes on Lilies" (price 2/9 by post); also Vol. XXVI. of the Royal Horticultural Society's Journal containing a report of

the Great Lily Conference at Chiswick, July 16, 1901.

The majority of Lilies are not ready for dispatch before the beginning of November; a few sorts, however, are ready earlier, such as Candidum, Croccum, longiflorum, etc., while some of the Japanese imported varieties do not arrive until December. Orders for Lilies will therefore be executed, if necessary, in two or more parts.

LILIUM AURATUMS BEING PREPARED FOR EXPORT FROM JAPAN,

Soils and Situations Recommended for Different Lilies.

| Indicates those Lilies of easiest culture, being strong free growers thriving in most soils. Wheresoil is very dry and poor, add loam and peat, or leaf soil; where heavy and damp, add sand and leaf soil. All require good drainage and plenty of moisture while in growth.

Ω Indicates those Lilies requiring a good friable soil, not too dry, and the addition of a little peat is

advisable. The lower part of the stems should be kept in shade.

¶ Indicates those Lilies delighting in shady and moist situations, sheltered from strong winds. A welldrained peat soil, where there is bottom moisture for the bulbs to root into, is recommended. Where a brook. stream, or pond is available, they may be planted at the margins, where the bulbs can remain moderately damp, and the roots find all the moisture they require below. In planting cover and surround bulbs with sand.
δ Indicates the chief stem-rooting Lilies.

```

For several beautiful New Lilies, see Novelty List, page 7.

N.B.—For the Interest of buyers we have added, after the name, the plant's native country.

LILIUM AURATUM, 3 YEARS ESTABLISHED IN POT.

δΩ Auratum (The White Golden-rayed Crimson-spotted Hill Lily of Japan), ht. 4 to 6 ft. This is indeed the Queen of Lilies, and should have a place in every garden and greenhouse. It commences to bloom in August and continues on into September. It is of simplest culture and perfectly hardy. Growing amongst Pæonies, and along the margins of evergreens, groups of L. auratum (6 to 12 bulbs in a clump, planted 9 inches apart), produce a grand effect. As isolated subjects on large lawns, groups of Lilium auratum look very handsome and stately. A situation should be chosen where the plants are sheltered from eutting winds and screened from the midday sun. On slopes, in a free soil, rather moist but not wet, this Lily does well, and makes a fine effect.

We are expecting our first consignment of this beautiful Lily to arrive early in December from Japan, and we are booking orders for delivery immediately on arrival, at the following prices. The larger-sized bulbs produce the most flowers.

Auratum, Extra Large Bulbs, I2 for 15/-; 25 for 28/-; 50 for 54/-; 100 for 105/-Splendid Large Bulbs, 12 for 10/6; 25 for 20/-; 50 for 38/-; 100 for 70/-Good-sized Bulbs, 12 for 7/6; 25 for 14/-; 50 for 26/-: 100 for 50/-Smaller Bulbs, 12 for 5/6; 25 for 10/-; 50 for 19/-; 100 for 36/-A few Special Monster Bulbs, 2/- & 3/- each. 23 giganteum. See Novelty List. page 7. ,, pictum, large white flowers, beautifully spotted crimson, and petals tipped red, very showy, lt. 4 ft.per doz. 21/platyphyllum, handsome flowers of enormous size, great substance, with broad white petals, spotted crimson, bold handsome foliage, and sturdy Extra strong bulbs 32 rubro-vittatum, large pure white flowers, with a broad deep erimson band down the centre of each petal; a Lily of great beauty and the admiration 36/-Extra strong bulbs Wittei, large pure white unspotted flowers, with golden band down each petal, ehaste and beautiful, ht. 3 to 4 ft. Extra strong bulbs, per doz. 36/-6 Alexandræ. See Japonicum. **ΩBakerianum** (syn. Lowi), a very charming rare lily from Burmah, bearing in July one to five bell-shaped pendent flowers, rosy white, minutely spotted earmine inside, anthers lavender and orange, ht. 3 ft. First-Class Certificate R.H.S.....(Supply uncertain) | Batemani (fatan), a beautiful Lily with rich glowing apricot-red flowers in August and

LILIES—continuea. each—s. a

Ω Giganteum (The Himalayas), the most majestic of Lilies, attaining a height, when established, of 10 to 12 ft., with large handsome heart-shaped leaves, and bearing from July to August immense long white trumpet-shaped flowers. Groups of this noble Lily in large herbaceous and shrubbery borders, woodlands, or wild gardens produce a grand effect. They should be planted in a half shady position, where they can establish themselves. The large flowering bulbs should be potted up and plunged in a cold frame and then be planted out in May, slight protection from early morning frosts being given. If foliage is made late in the season, after flowering, it must be protected during the winter with

LILIUM GRAYI.

straw. The smaller bulbs are specially recommended for naturalising, and will bloom feeely two or three years after planting.

- Grayi (North Carolina), a strikingly handsome Lily from the Alleghany Mountains, flowers of distinct and elegant form, rich deep blood-crimson, interior spotted maroon-black and shading to golden-yellow, habit light and graceful, Julyflowering, ht. 2 ft.
- | Hansoni—The Japanese Yellow Martagon Lily (Japau), large wax-like flowers with reflexing petals, bright golden-yellow, spotted crimsonmaroon; one of the most beautiful and distinct of June-flowering Lilies, ht. 3 ft.; of easy cultivation. FIRST-CLASS CERTIFICATE R. H. S. ...per doz. 30/-
- **n Humboldti** (Califoruia), large handsome flowers, rich golden-yellow, spotted dark crimson, of great substance, with recurved petals, very showy, ht. 5 ft., July-flowering. This Lity requires to be established before blooming freely Splendid large bulbs, per doz. 18/-
- Ω Humboldti var. magnificum, a grand form, surpassing the type in richness of colour and its free-flowering character; the large handsome flowers are of a rich deep golden, with large spots and blotches of blood-red. Established plants bear fifteen to twenty blooms on a spike, ht. 4½ ft.; 90 per cent. of the bulbs may be expected to bloom the first year, per doz. 25/-
- **Ω Japonicum var. Alexandræ,** a beautiful new Japanese Lily bearing in July large open pure white flowers of great substance, two to five on a stem, ht. 2 ft. (Supply uncertain)
- δΩ**Krameri** (South Japau), a chaste and beautiful flower, delicate rose-pink, of elegant outline and graceful habit of growth, July-flowering, ht. 2 ft.
 - Strong bulbs, per doz. 5/6 & 7/6; -/6 & o 8
- Ω Leichtlini (Japan), bearing in August numerous handsome golden-yellow flowers, spotted crimson-purple, on graceful stems, very beautiful, ht. 3 to 4 ft.per doz. 15/- 1
- δ Longiflorum—St. Joseph's Lily (China and Japan), very beautiful Lilies, producing in June and July long snow-white trumpet-shaped flowers, which are deliciously fragrant. Greatly prized for pot-culture, and for flower-beds and borders. While in growth they require plenty of water.

mately to a rich deep purple, ht. 3 to 4 ft.....

x LILY OF THE VALLEY, for Forcing, and making Plantations out of doors.

The Berlin Forcing Crowns can be strongly recommended for general early forcing, to come in after Christmas. For flowering before and at Christmas we recommend the Retarded Crowns. For Lilly OF the Valley Beds out-of-doors, and for massing in north horders, naturalising in woods, copses, etc., the Berlin Planting Crowns, Alexandra Crowns and Fortin's Crowns are recommended.

DIRECTIONS FOR FORCING BERLIN CROWNS.

Plant 15 to 20 crowns in a 5-inch pot, shaking in a little light soil amongst the roots, until they are tightly potted; leave the crowns free above the soil and a little below the rim of the pot. Place on bottom heat in a moist atmosphere, with a temperature of 80 to 85 degrees (if forced in March a temperature of 70 to 75 degrees will be sufficient), and cover the crowns with a little cocoa fibre or moss, which remove when top growth is showing. Tepid water should be frequently given, care being taken that it penetrates to the centre of the clump. To encourage simultaneously the development of flower and foliage, keep a flower-pot inverted over the crowns, until flower and foliage have made some progress, when gradually admit light. A dry atmosphere, or an insufficient supply of water at the roots, will cause the crowns, technically speaking, to go "blind." Where large quantities of Lily of the Valley blooms are required for cutting, the erowns should be planted rather thickly in boxes and receive the treatment described above.

OUTDOOR CULTURE OF LILY OF THE VALLEY.

- Out-of-doors the Lily of the Valley likes a partially shaded and moist situation. The best results are obtained on a shady border against a wall, placing the erowns 6 to 9 inches apart and leaving them to establish themselves. The soil should be a good loam enriched with manure and a top dressin; of old manure should be given annually. The plants should not be allowed to remain more than three years in one spot.
- × Barr's Improved English "Alexandra" Crowns, bearing sturdy spikes well clothed with large handsome bells; this strain is specially suited for outdoor culture, but may also be potted and very slowly forced in February or March (not earlier).......per 100, 8/6; per doz. 1/3
- × Fortin Grand Giant Strain, a very beautiful strain with remarkably large handsome bells on long sturdy stalks; the finest of all Lily of the Valley. The flowering crowns offered may be potted and brought on very slowly under glass, but they must not be potted or boxed up before March: ordinary forcing will cause them to go blind. Flowering crowns, per 100, 16/6; per doz. 2/4

Planting crowns (specially recommended) ,, 10/6; ,, 1/6
Retarded Crowns of Lily of the Valley for very early flowering, supplied from June to December. The earlier plantings of retarded crowns will give bloom in about three weeks, but the erowns started in November and December require a little more time. It is necessary that they be planted as soon as received, and grown on rapidly without any check. In June, July, and August all that is needed is to place them in a cold frame, and they come along quickly with very little attention. Later on, however, when the nights become cool, the temperature must be raised to that of the day. Failures sometimes occur with these retarded crowns in October, November, and December because they are not given the warmth they require at night.

The plants should be kept fairly dry overhead, and a warm moist atmosphere should be maintained. As the retarded crowns make a vigorous foliage it is advisable to remove one out of three largest this will exist.

leaves, as this will assist the development of the flower spike.

Growns of finest quality, per 1000, 80/-; per 100, 9/each-s. d

- - aurea, a greenhouse bulb of great beauty, from China, bearing in October lovely umbels of golden-yellow flowers of elegant outline, ht. 1½ ft. Grow in a temperature of 65° to 70°, and while at rest in summer keep slightly dampper doz. 10/6

NARCISSUS POLYANTHUS, or NOSEGAY DAFFODILS.

POLYANTHUS NARCISSUS, PAPER-WHITE "SNOWFLARE,

The Polyanthus Narcissi or Nosegay Daffodils produce large heads of sweet-scented flowers, and are specially adapted for Winter and Spring decoration in pots and jardinets, etc. The culture is the same as for Hyacinths. For flower beds and mixed borders they are great favourites, and produce a charming effect. Plant in October or November, and at the approach of winter give a light covering of long litter or other material to keep off severe frosts; remove the covering in March.

Where flowers are in demand from November to January, the Paper White "Early Snow-flake" and Double Roman Narcissi are of great value for forcing with the Roman Hyacinths (see

Culture, page 1).

NARCISSUS POETAZ NEW HYBRID POLYANTHUS NARCISSI.

(Hybrids of Polyanthus Narcissi, best forms, and Narcissus poeticus ornatus).

A very decorative new class of Nosegay Daffodils or Polyanthus Narcissi, growing taller than the old varieties, with a less stiff habit, and larger flowers, while at the same time they are quite hardy, and may be grown on in the garden from year to year, like the Daffodil. They also lend themselves to eulture in pots and jardinets, and will bear gentle forcing. To cut for vases or bouquets, these new Narcissi will be found of great value. The flowers are all delightfully fragrant

THE SACRED, OR GOOD LUCK LILY of China and Japan.

Called by the Chinese "Jos Flower," or "Flower of the Gods," and "Water Fairy Flower."

BOWLS OF THE CHINESE SACRED LILY.

This species of Polyanthus Narcissus, which we annually import from Northern China, is prized for the abundance of its flowers and its marvellously rapid growth. The flowers are white, with yellow eup, and very fragrant; they are mostly single, but a few doubles are sometimes found amongst them. Each bulb produces several flower-spikes, bearing many flowers. In China and Japan the bulbs are grown in the living rooms in fancy bowls filled simply with pebbles and water, and the natives compete with one another in growing the finest specimens for their New Year's Festival, successful culture being regarded as an emblem of "Good Luck," The bulb in this country can be grown as successfully as in China, and it is most interesting to watch its rapid growth, which is about 20 inches in forty days; place in a sunny window by day and ou a table near the centre of the room by night, as frost destroys the flower-buds. The natural atmosphere of a warm greenhouse is of course most suitable, and we can

strongly recommend this flower for CHRISTMAS FORCING. strongly recommend this flower for CHRISTMAS FORCING. Fuller particulars of culture sent with the tulbs. Orders now booked for immediate delivery on arrival, which we expect to be early in October.

crimson-searlet flowers, ht. 1½ ftper doz. 24/-	2	3
marginata. pancratioides. See Novelty List, page 8.		
sarniensis (Guernsey Lily), a most brilliantly coloured Autumn flower of elegant form; colour vivid crimson-scarlet, sparkling in the sun as if bespangled with gold, ht. 1 to 1½ ft. per doz. 9/6	0	10
sarniensis, collected in Cape Colony, and said to vary in shade, per 100, 60/-; ,, 8/6 undulata (syn. crispa), rose-coloured flowers, petals elegantly curled, a little gem for the greenhouse, ht. \(\frac{a}{4}\)ft	0	9
ORNITHOGALUM (Star of Bethlehem), very pretty hardy bulbs, flowering in Spring and early Summer. Arabicum and aureum should either be grown in pots or planted in a warm situation close to a south wall, at a depth of 6 inches. Pyramidale, Nutans, and Umbellatum are charming plants for naturalising in woodlands, meadows, etc.; the two latter will thrive in dense shade where few other plants will grow.		
arabicum, handsome white flowers in June, with glistening black central boss and yellow anthers. Well-grown specimens produce heads bearing as many as 20 flowers, each measuring 2 inches across. Plant on warm sunny south borders, and slightly protect during winter; by slight forcing it may be had in bloom by Easter, ht. 1½ ft. After flowering the bulbs should be well ripened off, if out-of-doors, by placing a hand-light over them, or if in pots by exposing them to full sun	0	3 4
*aureum, a beautiful little species, with flowers of a rich apricot-orange colour, ht. I ft.; suitable for pot-culture or out of doors against a south wall, where the bulbs should be left undisturbed and have a light covering during winter	0	6
lacteum (The Chickereekie of South Africa), a very lovely border plant with distinct spreading foliage and bearing a long elegant raceme of sating white flowers with primrose-yellow anthers, lasting a remarkably long time when cut, ht. 1\frac{1}{2} ft.; as a pot plant it is also prized	I	6
× longibracteatum, a striking plant and very ornamental in pots for greenhouse and window decoration, ht. 1½ ft	0	7
montanum, a very pretty dwarf species, with umbels of starry white flowers, ht. \(\frac{1}{4}\) ft.; a most valuable bulb for massing and edgings, also useful for naturalising in grass, woodlands, etc.	_	
nutans, elegant spikes of silvery grey flowers, outside shaded pale sea-green, beautiful; valuable for cutting and naturalising in woodlands, etc., ht. I ftper 100, 4/6; per doz. 8d. pyramidale, a very beautiful bulbons plant, but little known; in Spring its large spikes of beautiful snowy white flowers are very attractive in borders, ht. 2 ft	0	8
umbellatum splendens, a large handsome form of the old <i>Star of Bethlehem</i> , bearing umbels of pure white starry flowers effective in masses and edgings, valuable to naturalise, ht. 1½ ft	-	
OSTROWSKYA magnifica, a grand herbaceous perennial, bearing in summer immense bell-shaped flowers 6 inches in diameter, mauve to purple-blue, sometimes white, ht. 3 ft. FIRST-CLASS CERTIFICATE R.II.S. Plant in a light well-diained gritty or sandy soil against a sunny wall, and slightly protect in spring	2	6
,, , , , Smaller roots OXALIS (Wood-Sorrel), remarkably pretty little subjects for hot dry positions on rock-	I	6
work, etc., in light soil; they make charming edgings. In winter they should be protected with light litter. The varieties marked γ bloom from June to Autumn, and planted in pots or pans they form decorative subjects for the greenhouse and sitting-room.		
yarborea alba, flowers white, beautiful, ht. 8 inches; plant in Spring in cold frame or greenhouse	0	2
γ Bowiei, large brilliant rose flowers and elegant foliage, ht. $\frac{1}{2}$ ft. , 4/6; , 8d. cernua ft. pl., flowers double, eanary-yellow, very pretty, ht. $\frac{1}{2}$ ft. , 4/6; , 8d.	_	
,, var. bermudiana (The Bermuda Buttercup), a charming bulb for Winter flowering indoors, producing elegant terminal clusters of graceful bright yellow flowers for weeks. Pot up early and keep in a dark cool position for a few weeks to root well, and		
then remove to a sunny window, or greenhouse; the bulbs may also be potted later, kept in a frame, and planted out in spring	o	2
months, ht. 8 inches per 100, 8/6; per doz. 1/3	0	2
ylasiandra, very handsome and distinct, with large deep green leaves and woolly stems, and umbels of rosy crimson flowers, ht. 9 inchesper 100, 3/6; per doz. 6d.	-	-

RANUNCULUS, Turco-Persian, Turban and Persian, ht. 3 ft.

Nothing produces a brighter or more gorgeous effect in May and June than beds of Ranunculus; the flowers are all good for cutting, and the culture is very simple. They will grow in any ordinary flower border enriched with manure.

CULTURE.—Plant from October to February, 3 or 4 inches apart, selecting a dry day; press the tubers firmly into the soil, claws downwards, and cover them with sand, then with soil, keeping the crown of the tuber two inches under the surface. After planting cover the ground with long straw, cut heather, or other light material, which remove in March. In April and May, during dry weather, water the beds freely, and a plentiful crop of fine flowers will be the result. If grown as pot-plants put three tubers in a 4-inch pot, and plunge out of doors for a time.

with its long pendent bells, abounds in most parts of the country, and many suppose it to be the "Culver keys" referred to by Izaak Walton. The fine Spanish varieties (S. hispauica) have erect flower-spikes and open campanulate flowers. Scilla patula and its varieties have a robust tall habit with large campanulate open flowers. All are very effective in flower and shrubbery borders, and most valuable for wild gardens and woodlands, where they should be largely naturalised; they seed freely and quickly establish themselves. They also make charming potplants, and may be forced into bloom by March. The white varieties are greatly in demand to cut for table bouquets and vases. Wood HyacInths succeed in shady flower borders and bare shady places, and odd corners which often have a desert-like appearance in the flower garden can by their use be rendered bright and cheerful. They will also thrive under fir and pine trees where few other plants will grow. Plant 6 inches deep to obtain fine flower-spikes.

,, Leichtlini, flowers of a rich brilliant orange-gold, very showy and beautiful. AWARD OF MERIT, 1901per doz. 10/6	I	0

TROPÆOLUM continued.

"EXCELSIOR PEARL" TUBEROSE.

* speciosum, bright vermilion-scarlet flowers in clusters, quite hardy; grow in northern aspect or shady position, and in a moist soil.

Orders booked for delivery in Spring, when the plants are starting into growth... Established pots, full of roots, per doz. 7/6 & 10/6; 9d., 1s. & 1 6

* tuberosum, flowers yellow and red, very showy; plant in Spring and lift in Autumn; the roots are eaten by the natives of Peru, and have been found, in this country, to form an agreeable dish when boiledper doz. 3/6 o 4

* TUBEROSE. This valuable sweet-scented flower is too well known to need description. For early flowering pot the bulbs as soon as received, and plunge the pots in a temperature of about 60 degrees. The bulbs for succession keep dry, or pot at once to make root growth; in either case the temperature should not be below 50 degrees, or the bulbs will suffer.

Double American Dwarf, "Excelsior Pearl," the finest strain, having large pure white double flowers of delicious fragrance... Orders booked for supply from January to May ...per 100, 12/6; per doz. 1/9 0 2

BARR'S FAMOUS TULIPS.

Awarded Five Gold Medals by the Royal National Tulip Society, and many Silver Medals and Prizes at the London Spring Flower Shows.

Tulips are extremely hardy, and of easy culture, flowering freely in either sunny or shady situations, and developing their handsome showy flowers even in a confined town garden. By a judicious selection of Single, Double, and May-flowering Tulips, a most brilliant display of colours may be maintained in the garden from early April to end of May. In gardens where the flower beds must be kept gay from the earliest dawn of Spring, plant between the Tulips, Scilla sibirica, Chionodoxas, Snowdrops, and Crocuses; these flower first, and when out of bloom the leaves form a charming green groundwork for the blossoms of the Tulip. Our large breadths of Tulips at the Surbiton Nurseries in Spring create much comment, and elicit the greatest admiration from all who see them.

BARR'S EARLY SINGLE TULIPS.

Plant from October to November.

Those alone who have massed the different varieties of Single Tulips (planting the bulbs 4 inches apart) can form an idea of their great beauty and rich diversity in shade and colour, and the grand effect they produce grouped in flower beds or borders. The Single Tulip is extensively grown for indoor decoration (three or five bulbs in a pot) and cultivated in the same way as the Hyacinth for early flowering and succession.

The varieties of the little early **Duc Yan Thol Tulips** (with exception of the scarlet, adjed yellow variety, which flowers first) bloom together, and are of the same height, which renders them valuable for beds and borders, where a very early Spring display is required, also for early foreing with the Roman Hyacinth, etc.

Hints as to the arrangement of Early Tulips in beds, etc.—A difficulty is often experienced by Amateurs in knowing what kind of Tulips to select to bed together, seeing that they are not all the same height, and that some are earlier in flower than others. For the assistance, therefore, of purchasers we have taken special observations at our Nurseries as to the heights and the order in which the Early Single and Double Tulips flower.

The Heights we give in inches, and the order of flowering is indicated by (1), (2), (3), (4), or (5) after the name. It will be noticed that the **Double Tulips** generally are a little later-flowering than the Singles. The difference in time of flowering between each number is not great, so that (1) and (2) may be bedded together, also (2) and (3), and so on. The varieties of **Duc Yan Thol** are not numbered, as they flower before any of the others.

Arrangement of Colours in Bedding.—The following varieties if bedded together produce charming effects: Princess Marianne, Ophir & Or and Wowverman; Pottebakker White and Chrysolora; Prince of

BARR'S EARLY SINGLE TULIPS-continued.

Anstria, President Lincoln and Chrysolora; Rose Grisdelin and Princess Marianne; Pottebakker Yellow and Thomas Moore; Chrysolora and Dusart; Princess Ida and Rosamindi; Duchesse de Parma and Fabiola; Rosamindi and Rose Superbe; Couleur Cardinal makes a grand show bedded by itself, but Snowdrift goes well with it; Keizerskroon makes a fine bed with Queen Victoria as an ontside border.

Single Tulips suitable for Forcing.

The following varieties may be forced for decoration at Christmas and early January: Duc Van Thol varieties, Mon Trésor, Pottebakker White, Proserpine, and Vermilion Brilliant.

For decoration from the end of January to early March the following kinds should be used: Duchesse de Parma, Joost Van Vondel, La Belle Alliance, Pottebakker White, Primrose Queen, Prince of Anstria, Queen Victoria (La Reine), Rose Grisdelin, Thomas Moore, Vermilion Brilliant, and Yellow Prince.

For later forcing, to come in the latter part of March and early April, the following sorts are best: Conteur Cardinal, Duchesse de Paima, Josst Van Vondel, Keizerskroon, La Belle Alliance, Pottebakker White, Pottebakker Yellow, Prince of Austria, Prince de Ligne, Rosamundi, Rose Grisdelin, Rose Luisante, Rose Superbe, Vermilion Brilliant, White Swan, and White Hawk.

For general directions for treatment of bulbs in pots, see page 1.

Soil and Time of Planting.—Any ordinary garden soil enriched with old stable manure, with a sprinkling of quicklime dug in while fresh, suits the Tulip. Planting out of doors should take place from October to November, not earlier.

Barr's Selected Single Tulips for Bedding .- Suitable to plant separately or to bed together.

BARR'S DOUBLE TULIPS.

Plant from October to November.

Double Tulips have massive flowers of brilliant and beautifully diversified colours, and are very effective in beds on lawns, terraces, etc., also as edgings to beds of Roses and Rhododendrons and to shrubberies. Planted in groups of five or more, they are very attractive. Plant the bulbs four to six inches apart.

Time of Flowering.—The numbers in brackets after the name indicate the order of flowering, and will assist amateurs in making their selections for bedding, thus:—(1) corresponds in time of flowering with (1) of the Single Tulips; (2) corresponds with (2) of the Single Tulips, and so on. The heights, as registered at our Nurseries, are given in inches. By a judicious selection of Double and Single Tulips, a display of brilliant colours may be maintained in the garden for a long period.

Double Tulips should be planted three bulbs in a pot, and receive the cultural treatment recommended on page 1.

DOUBLE TULIPS SUITABLE FOR FORCING.

To force for earliest decoration, say **January**, Salvator Rosa may be used; the other varieties do not force successfully so early.

For decoration from the end of January to early March we can recommend the following sorts:—
Couronne d'Or, El Torcador, Imperator Rubrorum, Lady Palmerston, Murillo, Princess Beatrice, Tournesol,
Tournesol Yellow, and Titian.

For late foreing, to produce blooms from end of March to early April the following kinds should be grown:—Couronne d'Or, Imperator Rubrorum, La Candeur, Le Matador, Murillo, Tournesol, and Tournesol Yellow.

Variegated-leaved Tulips .- FOR BEDS, EDGINGS, AND BORDERS.

These are all of great beauty, the handsome variegated foliage providing a decoration from early Spring to Summer. The flowers also are handsome and showy.

Selection of 8 beautiful varieties, 3 bulbs of each, 6/-Mixed Varieties, per doz. 2/6

BARR'S

Beautiful "Cottage" Tulips and Tulip Species (All Single and mostly May-Flowering).

The name Cottage Tulips we have given to the various beautiful May-flowering Tulips which have mostly been found growing in old cottage gardens in England, Scotland, and Ireland, where they have been in some cases for over fifty years. They are all very beautiful, presenting a great variety in form and colouring, and having none of the stiffness of other Tulips. On account of their extreme hardiness they are specially adapted for permanent hardy flower borders, where they should be freely planted in large clumps and masses. They may also be naturalised in grass, wild gardens, etc., where during May they present a gorgeous appearance. The bulbs should be planted an inch or two deeper than the Early Single and Double Tulips. Those who have visited Kew Gardens in Spring will have noticed these Tulips planted freely in grass, and also used largely in filling flower beds on the lawns.

For cutting they are greatly prized, as the stems are long and a free graceful effect can be readily obtained by their use.

In most cases we give the heights as registered at our Surbiton Nurseries, but these will vary somewhat according to richness or poverty of soil.

Time of Flowering.—The Cottage Tulips take up the succession of flowering as the Early Single and Double Tulips are going out of bloom. As far as possible we have indicated the order of flowering by (1), (2), and so on. (1) will correspond in time of flowering with (5) of the Early Single and Double Tulips. The Parrot Tulips bloom together with those marked (2), and the Darwin with those marked (3) and (4) in the following lists.

 \mathfrak{C} Those Tulips marked Φ are species and gems for choice corners in the rock garden, where their lovely flowers will delight the eyes of all who see them.

BARR'S GRAND DARWIN TULIPS (May-flowering).

As grown at our Surbiton Nurseries, and exhibited at the London May Flower Shows, where their grand stately flowers elicit the admiration of all.

On May 11th, 1900, Her late Majesty Queen Victoria graciously accepted a basket of our handsome Darwin Tulips on the occasion of the Drawing-Room at Buckingham Palace, the stately beauty of the flowers eliciting much admiration.

For flower beds and borders we confidently recommend the following **Darwin Tulips** for their stately bearing and rich colours. They have been specially selected as being distinct, showy, and beautiful, so that buyers need have no hesitation in choosing the colours they require, as all are good. The cut flowers form an elegant decoration for vases, and last a long time in water.

By gentle forcing in pots these grand Tulips may be had in bloom by March, and will be found of great value for indoor decoration on account of their lovely soft colours and tall stately bearing. The centres of many are most beautifully marked.

In most cases we give the heights as registered at our Nurseries last Spring, also the order of flowering in relation to the flowering period of the Cottage Tulips, (1) being the first to open and (5) the latest.

TABLED FAMILIES AND THE POST OF THE POST O				

REMBRANDT TULIPS (May-flowering).

These are Darwin Tulips which have broken into a permanent variegation. are beautifully striped and blotched, and remarkably attractive in flower beds and borders. They range in height from 18 in. to 25 in. Barr's Beautiful Mixture, per 100, 25/-; per doz. 3/6

PARROT, or DRAGON TULIPS, with Laciniated Petals (May-flowering).

These Parrot, or Dragon Tulips, have large characteristic blossoms with curiously laciniated petals, and richly varied shades of beautiful colours in the same flower. They are very remarkable and exceedingly showy and effective in flower borders, while if grown in hanging baskets the drooping flowers look like orchids. In height they average about 15 inches, and bloom with the Cottage and Darwin Tulips.

The following are all selected extra strong bulbs, superior to what are often sold, and may reasonably he expected to bloom . but as in some seasons the Parrot Tulins are rather shy in flowering, to ensur

or expected to otoom; out as in some seasons the Parrot	Tulips are rather shy in flowering, to ensure a good
display in flower beds and borders it is wise to plant th	te bulbs only 4 inches apart.
12 bulbs each of 6 beautiful

"GOLD MEDAL" ENGLISH FLORIST TULIPS. BARR'S Awarded Five Gold Medals by the Royal National Tulip Society.

These beautiful May-flowering English Tulips have been prized by all lovers of the true Florist's Flower for over a century, although of late years the number of growers has diminished. The flowers are of perfect goblet form, and their beautiful and symmetrical markings quite unique.

CULTURE OF ENGLISH TULIPS.—Any good loamy garden soil suits the "English Tulip." The bulbs should be planted four inches deep and four inches apart, from the end of October to early in November, choosing a day when the ground is in nice friable condition; avoid planting when the ground is wet.

HINTS TO EXHIBITORS AND TULIP AMATEURS.—As the English Tulip often suffers much from hail

and wind during Spring, it is a good plan, when choice named sorts are grown, to erect over the bed a skeleton framework on which a covering of calico or white canvas is fastened in February or March, leaving the sides open till the buds show colour, when the covering may be brought down over the sides too. By this means hail, rain, and very hot drying sun are kept off, and the flowers open in all their purity, while the period of flowering is prolonged by some weeks.

To those who wish to know all about the English Tulip, we recommend "The English Tulip," a little pamphlet containing the lectures delivered on this flower at the great Tulip Conference of the Royal National Tulip Society, held at Royal Botanic Society's Gardens, May 12th, 1897, price 1s.

BARR'S ENGLISH MAY-FLOWERING TULIPS.

25 in 25 Beautiful Varieties, Bizarres, Byblomen, and Roses ... 10/6, 15/-, 21/-, & 42/-12 in 12

In the above collections the Bizarres embrace the following colours,—self shades of red, crimson, scarlet, maroon, and chestnut; also flakings of orange, scarlet, crimson, brown, and black, on a lemon or golden-yellow ground. The **Byblemen** are made up of self shades of purple, violet, lilac, and heliotrope, all with a dazzling white centre; also beautiful flakings of black, violet, purple, and lavender, on a clear white ground. The **Roses** contain lovely self shades of rose and rose-scarlet; also pretty flakings of delicate pink, soft rose, glowing scarlet, and deep crimson on a pure white ground.

Barr's Choice Mixture of Beautiful English Florist Tulips, in great variety, comprising Bizarres, Byblæmens, and Roses. When massed in quantity in beds and borders these beautiful Tulips present a brilliant picture, resembling a richly coloured Persian carpet

Crimson Rambler, a most robust-growing Polyantha Rose, producing dense masses of small double bright crimson flowers in large trusses during Summer: yery hardy and in-			

valuable for arbours, pillars, arches, etc., but not recommended for walls. Do not prune in Spring, but early in Autumn remove all weak and very old wood, and thin out the growth

A Select List of the best Climbing Roses will be found in our Hardy Plant Catalogue.

USEFUL TOOLS FOR BULB PLANTING, Etc.

Barr's Special Bulb Planter (Regd. 368338) specially designed for planting bulbs in grass. At every operation it lifts a clean circular little sod of grass, which is released from the cup when the second hole is made, and lies ready at hand to fill in the holes when the bulbs have

been put in. A time must be chosen for planting when the ground has become softened after early Autumn rains and not when in a hard and baked condition, as it is then impossible to use this, or indeed any other, tool with success. By the use of BARR'S SPECIAL BULB PLANTER a large quantity of bulbs may be planted in a very

short time, and without the least disturbance of the sward. The length of the tool is 38 inches over all, weight about 3½ lbs. The cup is manufactured from high-class hardened steel and always earries a keen cutting-edge.

Supplied in 3 sizes of cup:—To cut out a circular hole 2 inches diameter' 21/4 10/6 each. 2

We shall send the medium size $(2\frac{1}{4})$ in.) if no instructions to the contrary are given.

Special Bulb Dibber Barr's (Regd. 468878), specially designed for dibbling bulbs into borders, etc.; steel shod, with strong iron tread and cross wooden handle; a good strong heavy tool, weight about 63 lbs., length 36 inches over all. 9/6 each.

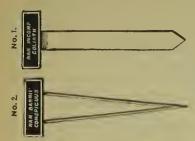

Barr's Special Bulb Trowel, made of best steel, specially designed for lifting and planting bulbs, etc. It will be found of great value for general garden purposes, and far in advance of the old-fashioned trowel. 2/9 each.

Garden Trowel, solid cast steel, finest quality, 5 in., 1/2; 6 in., 1/3; 7 in., 1/6 each. riveted steel, good quality, 5 in., 6d.; 6 in., 7d.; 7 in., 9d.

Fern Trowel, bright steel, best English make, 2/- cach. ,, with leather sheath, 2/9 each. SET OF LADIES' GARDEN TOOLS (Parkes' best quality), Containing :--

Solid cast steel Spade, 51 in. by 9 in.; cast steel Fork, 4 pronged; light American-pattern Rake, 8 teeth, well-handled; Draw Hoe, cast steel, well-handled, 6 in.; 12/6 per set.

For a fuller list of Tools and other Garden Requisites, see Barr's Seed Guide, free on application.

BARR'S SPECIAL METAL LABELS FOR BULBS, Etc. With Ralsed Lettering.

No. 1, with solid metal shank, about 9 inches long. We specially recommend this for beds and borders. 4d. each.

No. 2, with stout wire stem, 6 or 9 inches long; specially snitable for pots, etc. (in ordering please state whether a short or long stem is required). 3d. each.

The above prices include the stamping of any name required.

These labels are only made to order. The time taken to execute an order is generally from 2 to 3 weeks.

Labels, Wooden, for pots, etc., painted white, superior quality, packed in boxes of 100 each.

per 100, 4 in., 8d.; 5 in., 10d.; 6 in., 1/2; 7 in., 1/3; 8 in., 1/6; 9 in., 2/-; 12 in., 3/for suspending, painted white, superior quality, 4 in., per 100, 9d.; 6 in., per 100, 1/yery stout, best yellow deal, planed and pointed, tarred bottoms 14 in. long, 1½ in.
wide, ½ inch thick, same as we use at our own Bulb Nurseries, painted with ordinary white paint, using
raw linseed oil, and written on while paint is wet with Wolff's indelible ink pencil, will last 3 to 4 years, per 100, 14/6; per doz. 2/-.

For Metallic Garden Labels, New "Ideal" Metallic Labels, etc., see BARR'S SEED GUIDE.

HYACINTH GLASSES, Plain colours, 6d., 8d., 10d., 1/-, to 1/6 each; per doz. 5/6, 7/6, 9/6, 11/6, to 16/6. In Fancy Designs, very choice, 2/6, 3/6, 4/6, to 10/6 each. Wire Supports (brass), 4/6 per doz.

MANURES, SOILS, COCOA FIBRE, etc.

Barr's Phytobroma. The best Manure for Daffodils, Hyacinths, Tulips, etc. It should be mixed with the soil below the bulbs at planting time at the rate of 4 cwt. to the acre, or 1\frac{1}{2} oz. to the square yard, and in spring, when the bulbs are showing above ground, a top-dressing may be given of 3 oz. to the square yard. For Pots, mix *Phytobroma* with the soil, to be used at the rate of 1 lb. to the bushel, and in Spring, when growth is showing, top-dress once a fortnight, using a small teaspoonful and well mixing with surface soil. 2-lb. tin, 1/-; 7 lb. 2/6; 14 lb. 4/6; 28 lb. 7/6; 56 lb. 12/6; I cwt. 20/-.

Basic Slag, per cwt. 10/6; per 7 lb. 1/-.

Bone Meal (Genuine fine Crushed Bones), best quality, per cwt. 14/-; per 7 lb. 1/3.

Sulphate of Potash, per cwt. 21/-; per 7 lb. 1/9.

Clay's Fertiliser, a well-known effective manure, confidently recommended. Tins 6d., 1/-, and 2/6 each; in bags, 7 lb., 2/6; 14 lb., 4/6; 28 lb., 7/6; $\frac{1}{2}$ -cwt., 12/-; 1 cwt., 20/-

Ichthemic Guano, 7 lb., 2/6; 14 lb., 4/6; 28 lb., 7/6; 56 lb., 12/6; 1 cwt., 20/- (bags free). Sample tins, 6d. and 1/-.

Standen's Gardeners' and Amateurs' Manure, in tins, 6d., 1/-, 2/6 and 5/6; in bags, 28 lb., 10/6; 56 lb., 18/-; 1 cwt., 32/-.

Thomson's Vine and Plant Manure, 1 lb., 1/-; 3 lb., 2/-; 7 lb., 3/6; per \(\frac{1}{4}\)-cwt., 6/-; \$-cwt., 10/-; I cwt. 20/-.

Barr's Specially Prepared Fertilised Fibre and Charcoal Mixture for growing Bulbs in Bowls, Jardinets, Glasses, etc. Specially recommended for Hyacinths grown in glasses: fill the glasses with the preparation, and add water till no more can be absorbed. Place the bulb so as to rest the base on the preparation, and tie it down with brown paper, leaving an opening in the centre of the paper for the shoot. When the bulb has well rooted the paper may be removed; care must be taken that the material in the glass is kept wet. The same remarks apply to bulbs grown in bowls, etc.: they must be kept in place till they have rooted. 3/6 per bushel; 1/- per pack peck.

Jadoo Fibre, cleanly to use, very light, for growing plants and bulbs in hanging baskets, jardinets, etc. Full particulars on application. Per peck, 1/-; per bushel, 3/6; per 3 bushels, 8/-.

Loam, Peat, Leaf Soil, Silver Sand, each, per bushel, 2/6.

Barr's Specially Prepared Potting Soil, containing a suitable quantity of Phytobroma, per bushel, 2/6.

Cocoa Fibre, superior quality, 1/3 per bushel; 4 bushels for 4/6.

Small Pebbles and Charcoal, suitable for growing Hyacinths, etc., in bowls and vases without drainage, 6d. per quart; 3/6 per peck.

For a fuller List of Garden Requisites, see BARR'S SEED GUIDE, free on application.

Special Notices and Terms of Business.

FREE CARRIAGE OF BULBS.

- All Orders for Bulbs to value £1 and upwards sent Carriage Paid to any Railway

 Station in the United Kingdom.
- Prepaid Orders for Bulbs to value 10s. and upwards sent Carriage Paid to any Railway Station in the United Kingdom.
- 5% Cash Discount on Bulb Orders of 20s. and upwards.—1s. in the & discount is allowed for Cash with Order (with exception of the special Collections offered on page 3, which are strictly nett), and this may either be deducted by the Customer when remitting, or a liberal equivalent in goods will be added to the Order. The same discount may also be deducted from all Bulb accounts of 20s, and upwards when paid within 14 days from date of invoice (excepting Collections on page 3, which are strictly nett).
- Terms of Credit.—Our books are made up at Christmas and Midsummer, when all accounts are due nett.
- Orders.—We shall esteem it a favour if our Customers will kindly use the Order Sheet that accompanies this Catalogue, and be particular to fill in the full postal and rail address; sometimes Orders reach us without either name or address, and it is impossible to trace the senders.
- Remittances. Money Orders and Postal Orders should be made payable at Bedford Street Post Office; these and all Cheques should be crossed "London and County Bank." Small amounts may be remitted in Postage Stamps or Coin, in a Registered Letter.
- Packages.—Boxes, Bags, etc, are charged at cost price, but these may be deducted from our account if returned Carriage Paid within a fortnight. Returned empties should have the sender's name on the address label for identification, and an advice sent by post, stating date of despatch and name of Railway Co.
- Catalogues. Our Seed Guide is published in January, Descriptive Catalogue of Bulbs and Tubers for Winter and Spring Planting in January, Hardy Plant Catalogue 1st of March, Daffodil and General Bulb Catalogues in August. We are always pleased to forward any of these Catalogues, free of charge, to friends of our Customers on receipt of a line requesting us to do so.
- Nurseries, Surbiton.—Our Nurseries are situated near to Surbiton Station (London and South-Western Railway). Visitors are invited during March, April, and May to see our magnificent Collections of Daffod!!s and Tulips in flower; and during Summer and Autumn to see our collection of Herbaceous Plants and Alpines, and many rare and beautiful Bulbous Plants. Cabs are always to be had at Surbiton Station.
- **Gardeners.**—We keep a special Register of Gardeners in want of situations, and shall be pleased to put such in communication with any of our Customers requiring Head Gardeners.

Notices to our Foreign and Colonial Correspondents.

- Prepayment necessary.—Owing to the difficulty of collecting accounts abroad, we beg that Customers will kindly enclose with their Orders a remittance, a draft, or an "order to pay." on a London Bank, or Agent; the remittance should be sufficient to cover cost of carriage when the freight is required to be paid in advance.
- Cash Discount 5%.—In the case of Prepaid Orders we allow a discount of 1s. in the £ from the amount of Seeds or Bulbs ordered, which may either be deducted by the Customer when remitting, or if this is not done, a liberal equivalent in goods will be added to the order.
- Carriage.—No allowance for Carriage can be made in the case of Foreign Orders; the extra attention necessary precludes any kind of allowance in this respect.
- Parcel Post Rates. AUSTRALIAN COMMONWEALTH: 6d. per lb. (1s. for the first lb.).

NEW ZEALAND: under 3 lb. 1s.; 7 lb. 2s.; 11 lb. 3s. TASMANIA: 6d. per lb. (1s. first lb.).

CAPE COLONY and NATAL: 9d. per lb. TRANSVAAL: 1s. per lb.

- INDIA: 3 lb. for 1s,; 7 lb. for 2s.; 11 lb. for 3s. JAPAN: 3 lb. 1s. 10d.; 7 lb. 3s. 6d; 11 lb. 5s. 2d. CANADA: 6d. per lb. (8d. for the first lb.). CHINA: 3 lb. 1s.; 7 lb. 2s.; 11 lb. 3s.
- UNITED STATES of America (Official Service): 2s. for each parcel not exceeding 4 lb. 6 oz., in weight.
- We recommend the Parcel Post to be used where possible, parcels thus sent being delivered at the Customer's house quicker, and without shipping agents' additional charges.
- Shipping, etc.—In Shipping Bulbs and Plants to Australia, New Zealand, America, India, and the Cape, we exercise great care in selecting, preparing, and properly packing the same. Still there are so many contingencies that we cannot, in any way, hold ourselves responsible for the condition in which Plants or Bulbs reach their destination. Our Customers will confer a favour if they report on arrival, the condition of the goods. Our experience in successfully preparing and shipping Seeds, Bulbs, and Plants to India and the Colonies extends over a long period.

BARR & SONS' LONDON OFFICES AND WAREHOUSE.

Barr & Sons, 11, 12 & 13 King St., Covent Garden, London.

NURSERIES:—Surbiton, Surrey.
